

# Accessibility Evaluation Report – Alatus Solutions

## 1. Executive Summary

This report summarizes the accessibility evaluation of the Alatus Solutions. The evaluation was conducted against WCAG 2.2 Level A and AA success criteria. Tools used include Wave, AXE, Accessibility Insight, Lighthouse, and NVDA.

Common barriers identified include non-descriptive interactive elements, insufficient color contrast, insufficient alt text, missing accessible name and role, elements not accessible. Other issues were identified by testing with the NVDA screen reader on Chrome and Firefox, in Windows 11.

Recommendations were included for each issue.

## 2. WCAG 2.2 A, AA Conformance Summary

WCAG 2.2 Success Criterion	Support	Remarks & Explanations
1.1.1 Non-text Content	Partially Supports	<p>Web provides equivalent text alternatives for most of the non-text contents present on the page which helps screen readers to have proper information about the meaningful images which have descriptive alt attributes. However:-</p> <p>Some example/instance where the criteria does not meet the requirement are:</p> <ul style="list-style-type: none"><li>Alt text not descriptive for image.</li></ul>
1.2.1 Prerecorded Audio-only and Video - only	Not Applicable	Web does not contain prerecorded Audio-only or Video-only media, which require text alternatives.
1.2.2 Captions (Prerecorded)	Supports	Web does support synchronized media with prerecorded audio content requiring captions.

WCAG 2.2 Success Criterion	Support	Remarks & Explanations
1.2.3 Audio Description or Media Alternative (Prerecorded)	Supports	Web supports time-based media or synchronized media with pre-recorded video content.
1.2.4 Captions (Live)	Not Applicable	Web does not contain live Synchronized captions for live media that contains audio.
1.2.5 Audio Description (Prerecorded)	Supports	Web supports time-based media or synchronized media with pre-recorded video content.
1.3.1 Info and Relationships	Partially Supports	<p>Web does convey the information and relationships for many UI elements programmatically.</p> <p>However:-</p> <p>Some example/instances where the criteria does not meet the requirements are:</p> <ul style="list-style-type: none"> <li>• Heading structure not in logical order.</li> <li>• Missing updated information after user selects button.</li> </ul>
1.3.2 Meaningful Sequence	Supports	In Web, all of the content on the screens supports a meaningful reading sequence, which does not restrict assistive technology to read the content correctly to make the user fully understand the intended meaning.
1.3.3 Sensory Characteristics	Does Not Support	<p>Web does rely solely on sensory characteristics for understanding or operation, as a tooltip is provided for most of the content.</p> <p>Some example/instances where the criteria does not meet the requirements are:</p> <ul style="list-style-type: none"> <li>• Missing Tooltip for the Next and Previous button icons</li> <li>• Missing tooltip of social media icons</li> </ul>

WCAG 2.2 Success Criterion	Support	Remarks & Explanations
1.3.4 Orientation	Not Applicable	Web content does not restrict its view and operation to a single display orientation, such as portrait.
1.3.5 Identify Input Purpose	Supports	The purpose of each input field collecting information about the user can be programmatically determined.
1.4.1 Use of Color	Partially Supports	<p>In Web, color is used mostly as the only visual means of conveying information, indicating an action, prompting a response, or distinguishing a visual element for any UI component.</p> <p>However, example where the criteria does not meet the requirement:</p> <ul style="list-style-type: none"> <li>● Color is used to indicate the error.</li> </ul>
1.4.2 Audio Control	Not Applicable	Web does not contain any audio that plays automatically for more than 3 seconds.
1.4.3 Contrast (Minimum)	Does not Support	<p>Web does not pass the contrast ratio as 4.5:1 of many UI elements.</p> <p>Some example/instances where the criteria does not meet the requirements are:</p> <ul style="list-style-type: none"> <li>● Button text fail color contrast ratio</li> <li>● Placeholder texts fail color contrast ratio</li> <li>● Insufficient contrast ratio for the text.</li> <li>● Insufficient color contrast ratio for text</li> </ul>

WCAG 2.2 Success Criterion	Support	Remarks & Explanations
1.4.4 Resize Text	Partially Supports	<p>Web contains text that can be resized up to 200 percent without loss of content or functionality for most of the pages which helps the low vision users to browse the page efficiently.</p> <p>However, example where the criteria does not meet the requirement:</p> <ul style="list-style-type: none"> <li>• Contents get hidden after resize</li> </ul>
1.4.5 Images of Text	Supports	<p>If the technologies being used can achieve the visual presentation, text is used to convey information rather than images of text.</p>
1.4.10 Reflow	Partially Supports	<p>Web content does reflow appropriately after 400% zoom on the pages for most of the elements, which helps the low vision users to browse the page efficiently.</p> <p>However, example where the criteria does not meet the requirement:</p> <ul style="list-style-type: none"> <li>• Contents get hidden after reflow</li> </ul>
1.4.11 Non-text Contrast	Supports	<p>Most of the non-text contents present in the web meet the minimum contrast ratio of 3:1.</p>
1.4.12 Text Spacing	Partially Supports	<p>In the Web, when text spacing styles are applied, contents and functionality on pages are available appropriately for most of the contents, which constrict the low vision users to browse the page efficiently with increased space between the lines. However:-</p>

WCAG 2.2 Success Criterion	Support	Remarks & Explanations
		<p>Example/instance where the criteria does not meet the requirement:</p> <ul style="list-style-type: none"> <li>Content doesn't adopt the text spacing.</li> </ul>
1.4.13 Content on Hover or Focus	Supports	Content presented on keyboard focus is dismissible and persistent.
2.1.1 Keyboard	Does Not Support	<p>Web does support keyboard operations for most of the interactive elements, which prevents keyboard users from interacting with the web pages.</p> <p>However:-</p> <p>Some example/instances where the criteria does not meet the requirements are:</p> <ul style="list-style-type: none"> <li>Elements not accessible through keyboard.</li> <li>Missing Esc. functionality on modal dialog</li> </ul>
2.1.2 No Keyboard Trap	Supports	Keyboard focus is never locked or trapped at one particular element.
2.1.4 Character Key Shortcuts	Not Applicable	Web does not contain Character Key Shortcuts.
2.2.1 Timing Adjustable	Not Applicable	Web does not impose a time-out limit to the users.
2.2.2 Pause, Stop, Hide	Does not Support	Web does not support controls that have the option to pause, stop, and hide for all the content that blinks, scrolls, or updates regularly.

WCAG 2.2 Success Criterion	Support	Remarks & Explanations
		<p>Example/instances where the criteria does not meet the requirement is:</p> <ul style="list-style-type: none"> <li>Missing Play/Pause functionality on the moving carousels</li> </ul>
2.3.1 Three Flashes or Below Threshold	Not Applicable	<p>Web does not provide any content that flashes more than three times in one second or below thresholds.</p>
2.4.1 Bypass Blocks	Does not Support	<p>Web does not provide a way to bypass blocks of content by providing a skip navigation link.</p> <p>Example/instance where the criteria does not meet the requirement are:</p> <p>On the Home page, the 'Skip to main content' link is not defined.</p>
2.4.2 Page Titled	Supports	<p>Pages have titles that describe the topic or purpose.</p>
2.4.3 Focus Order	Partially Supports	<p>In Web, the focus order is sequential and meaningful for multiple contents.</p> <p>However:-</p> <p>example/instance where the criteria does not meet the requirement:</p> <ul style="list-style-type: none"> <li>Keyboard focus order not in logical order</li> </ul>
2.4.4 Link Purpose (In Context)	Partially Supports	<p>Web contains links that describe their purpose for most of the elements, which help screen reader users understand the control behavior.</p> <p>However:-</p> <p>Example/instance where the criteria does not meet the requirement:</p> <ul style="list-style-type: none"> <li>'Read more' link is not descriptive</li> </ul>

WCAG 2.2 Success Criterion	Support	Remarks & Explanations
2.4.5 Multiple Ways	Supports	Multiple ways are available to navigate the pages within the site.
2.4.6 Heading and Labels	Partially Supports	<p>Most of the visually appearing headings are defined programmatically and labels are defined descriptively.</p> <p>However :-</p> <p>Some example/instances where the criteria does not meet the requirements are:</p> <ul style="list-style-type: none"> <li>● Visually appearing headings not defined programmatically</li> <li>● Buttons are not descriptive enough</li> </ul>
2.4.7 Focus Visible	Does not Support	<p>Web does not provide a visible keyboard focus indicator for most of the interactive elements which helps the assistive technology users to track the navigation accurately. However:-</p> <p>Some example/instances where the criteria does not meet the requirements are:</p> <ul style="list-style-type: none"> <li>● Keyboard focus indicator is not visible properly</li> <li>● Missing keyboard focus indicator.</li> </ul>
2.4.11 Focus Not Obscured (Minimum)	Supports	In Web, elements have keyboard focus; they are not entirely covered or hidden by page content for most of the controls.
2.5.1 Pointer Gestures	Not Applicable	Web does not use pointer gestures.
2.5.2 Pointer Cancellation	Not Applicable	Web does not have pointer cancellation and no down-event functionality.

WCAG 2.2 Success Criterion	Support	Remarks & Explanations
2.5.3 Label in Name	Partially Supports	<p>In the Web, most of the accessible names of user interface controls match their visual labels. However :-</p> <p>Some example/instances where the criteria does not meet the requirements are:</p> <ul style="list-style-type: none"> <li>● Accessible name is not same as the visible name for links.</li> </ul>
2.5.4 Motion Actuation	Not applicable	Web does not contain functionality that requires device motion or user motion.
2.5.7 Dragging Movements	Not applicable	Web does not have any functionality that uses pointer dragging.
2.5.8 Target Size (Minimum)	Supports	Pointer input target sizes are at least 24 by 24 pixels unless a 24-pixel diameter circle centered on the target element does not intersect with any other target or a 24-pixel circle centered on an adjacent target, the functionality can be achieved in some other conformant manner, the target is in a sentence or list, or the target size can't be modified or is essential to the functionality.
3.1.1 Language of Page	Supports	The language of the page is defined for the web.
3.1.2 Language of Parts	Not applicable	Web does not contain any different language of page content.

WCAG 2.2 Success Criterion	Support	Remarks & Explanations
3.2.1 On Focus	Supports	When a page element receives focus, it does not trigger a substantial change to the page.
3.2.2 On Input	Supports	When a user inputs information or interacts with a control, it does not trigger a substantial change to the page.
3.2.3 Consistent Navigation	Supports	Navigation links that are repeated on web pages do not change order when navigating through the site.
3.2.4 Consistent Identification	Supports	Repeated elements and structures behave consistently with internet standards and each other.
3.2.6 Consistent Help	Supports	Contact and self-help details or functionality are presented consistently when present on multiple web pages.
3.3.1 Error Identification	Supports	In the Web, the screen reader identifies error messages for most of the form elements that provide information about input errors in text that allows assistive technology users to perceive an error.
3.3.2 Labels or Instructions	Partially Supports	<p>Web contains form fields that have programmatically defined labels or instructions for many pages that help users to know what input data is expected.</p> <p>However:-</p> <p>example/instances where the criteria does not meet the requirement:</p> <ul style="list-style-type: none"> <li>● Missing visual name of the edit field.</li> </ul>

WCAG 2.2 Success Criterion	Support	Remarks & Explanations
3.3.3 Error Suggestion	Partially Supports	<p>Web provides descriptive error suggestions on most of the form fields to ensure that users receive appropriate suggestions for correction of an input error. However:-</p> <p>example/instances where the criteria does not meet the requirement:</p> <ul style="list-style-type: none"> <li>● Error message not descriptive</li> </ul>
3.3.4 Error Prevention (Legal, Financial, Data)	Supports	<p>If the user can change or delete legal, financial, or test data, the changes/deletions can be reversed, verified, or confirmed.</p>
3.3.7 Redundant Entry	Supports	<p>Information that a user must re-enter to complete a single-session process must be auto-populated or available for the user to select, unless re-entering the information is essential to the functionality, the information poses security issues, or the previously-entered information is no longer valid.</p>
3.3.8 Accessible Authentication (Minimum)	Supports	<p>A cognitive function test (such as remembering a password or solving a puzzle) is not required for any step in an authentication process unless the cognitive function test can be bypassed in some way, can be completed with assistance by some other mechanism, uses object recognition (such as "click on the photo of a flower"), or uses identification of non-text content provided by the user (such as a user-provided image).</p>

WCAG 2.2 Success Criterion	Support	Remarks & Explanations
4.1.2 Name, Role, Value	Does Not Support	<p>In the Web, name, role, state is not defined for most of the UI elements programmatically which limits the screen reader users to understand the functionality and current state and role of the control.</p> <p>Some example/instances where the criteria does not meet the requirements are:</p> <ul style="list-style-type: none"> <li>• Missing accessible name for the buttons.</li> <li>• Missing role and state of accordion buttons</li> <li>• Missing accessible name and role of the modal dialog.</li> <li>• Missing accessible name for the pagination links.</li> <li>• Missing accessible name for the frame.</li> </ul>
4.1.3 Status Messages	Supports	<p>Web provides status messages programmatically that can be determined by the assistive technology users for most of the action performed.</p>

### 3. Severity Ratings

Issues are classified using the following severity levels:

- **Critical:** Blocks access to essential content or functionality.
- **Significant:** Major barriers that make interaction very difficult.
- **Moderate:** Issues that hinder usability for some users.
- **Recommendation:** Non-blocking issues that could improve usability.

### 4. Common Issues and Concepts

The following common issues were found across multiple screens:

- **WCAG 1.1.1 Non-text Content (Level A) - Moderate**

1. **Alt text not descriptive for image.**

**Actual:** Alt text is not descriptive for the image under the '\$159 New Patient Exam and Cleaning'.

**Expected:** Ideally alt text should be descriptive for the informative images.

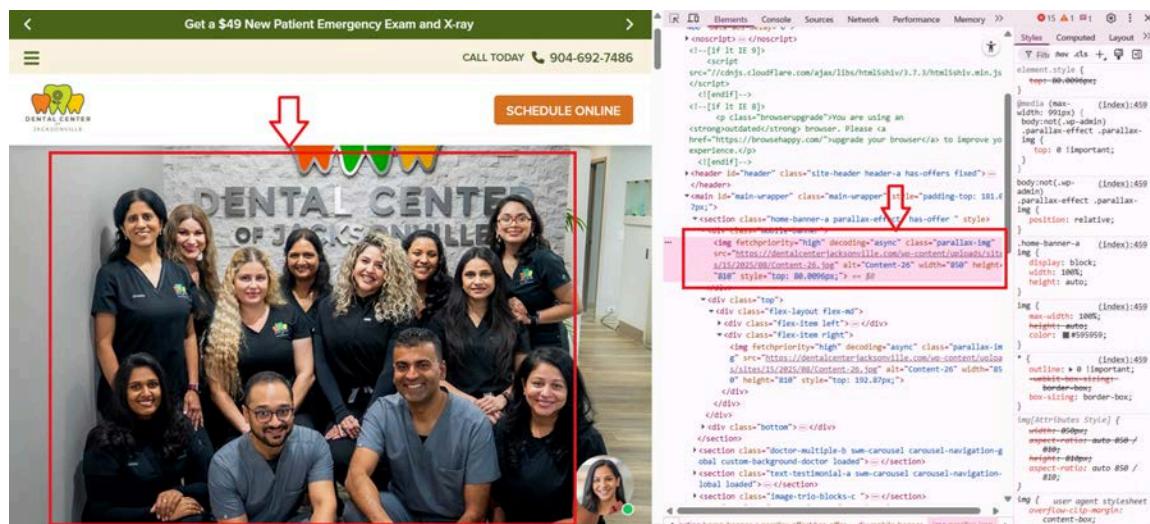

**Note:** Same issue repro for the images on the

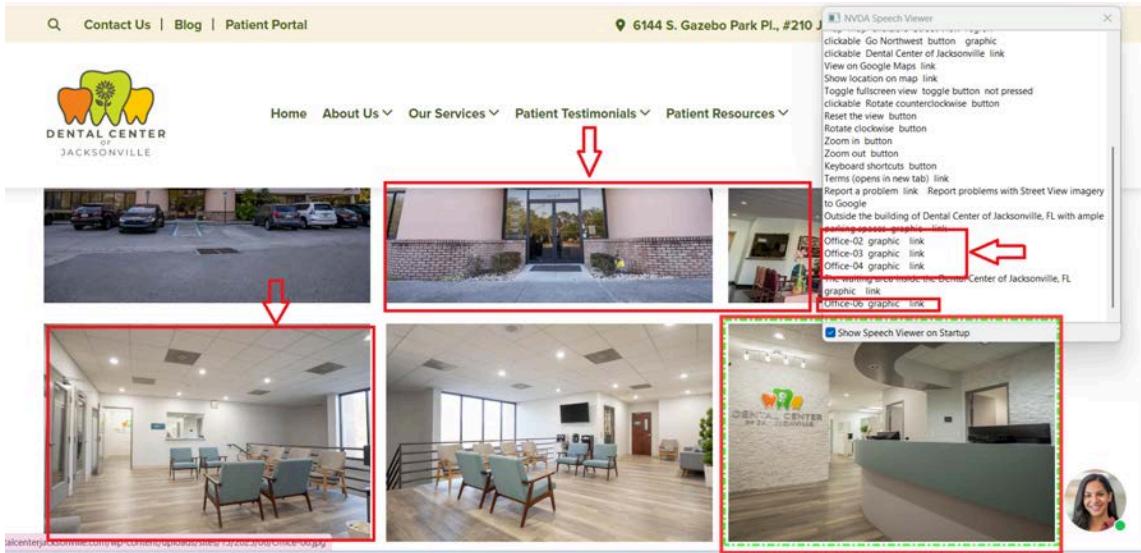

<https://dentalcenterjacksonville.com/about-us/tour-the-office/> page

**Dev Recommendation:**

- I. Write concise and meaningful alt text that accurately conveys the purpose or content of the image, tailored to its context.
- II. Avoid generic phrases like "image of"—describe what is shown, not just that it's an image.
- III. Ensure alt text covers key details if the image conveys important information; for decorative images, use an empty alt attribute (alt="").
- IV. Keep alt text under 125-140 characters for readability by screen readers, and use captions or longer descriptions for complex visuals.

**Refer to:** <https://www.w3.org/WAI/tutorials/images/informative/>

- **WCAG 1.3.1 Info and Relationships (Level A) - Moderate**

1. **Heading structure not in logical order.**

**Actual:** Heading structure is not in logical order. Observed that the H3 heading is defined after the H1 heading.

**Expected:** Heading structure should be in logical order. H2 heading should be defined after the H1 heading instead of H3 heading.

**Note:** Same issue repro on the following pages:

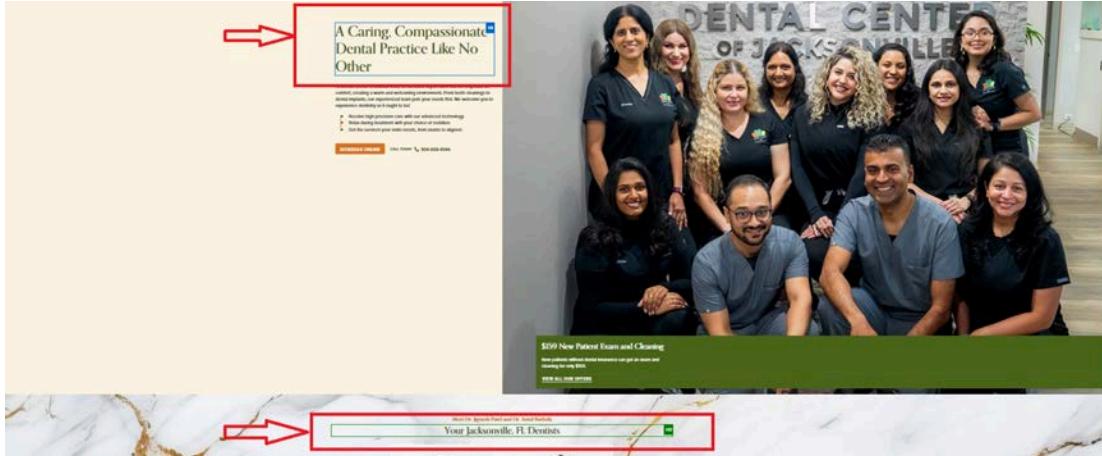

<https://dentalcenterjacksonville.com/blog/stronger-smiles-start-now-with-dental-implant>

<https://dentalcenterjacksonville.com/patient-testimonials/smile-gallery/>

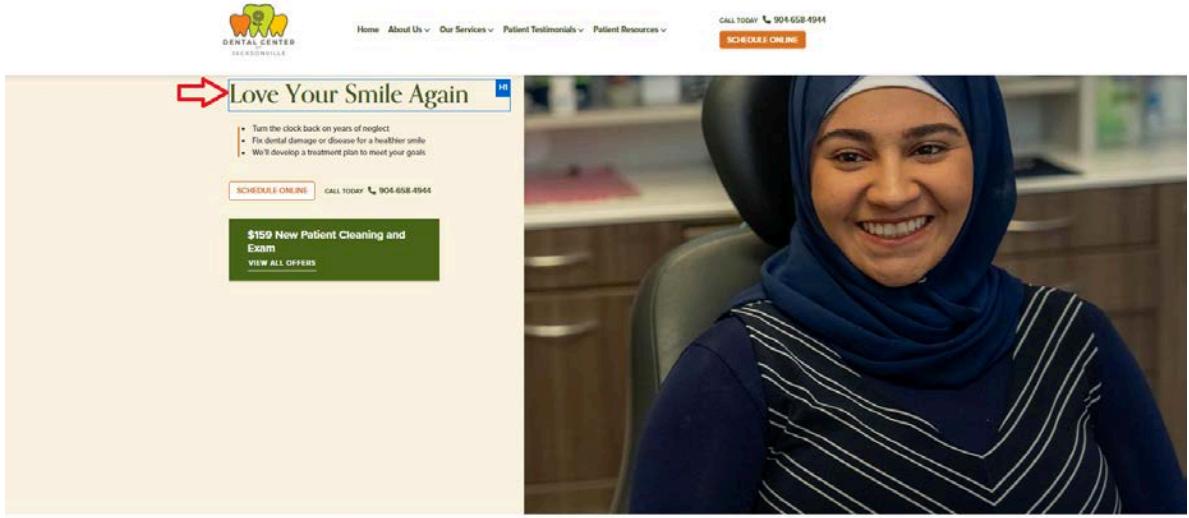

<https://dentalcenterjacksonville.com/patient-testimonials/>

**Dev Recommendation:** Ensures that the heading structure is in logical order, it is defined as H1>H2>H3>H4>H5>H6.

**Refer to:** <https://www.w3.org/WAI/tutorials/page-structure/headings/>

A screenshot of a blog post from the same dental practice website. The post features a large image of a smiling man with a beard. The title of the post is "Stronger Smiles Start Now With Dental Implants", with a red arrow pointing to it. Below the title, there is a section titled "Reclaim Your Bite This Summer" with a red arrow pointing to it. The post discusses how missing teeth can affect summer enjoyment and offers solutions.

[Home > Patient Testimonials > Smile Gallery](#)

[Home > Patient Testimonials](#)

## 2. Missing updated information after user selects button.

**Actual:** Screen reader does not announce any information after user selects the Previous/Next buttons.

**Expected:** Screen reader should announce the updated slide information after user selects the Previous/Next buttons.

**Note:** Same issue repro for the carousel slides defined under the 'Read Why Our Patients Love Us' heading.

Same issue repro for the page <https://dentalcenterjacksonville.com/about-us/tour-the-office/>

**Dev Recommendation:**

- I. Use aria-live="polite" on a region that dynamically updates to announce changes when slides change, so screen readers notify users of the currently active slide.
- II. Update the accessible name or description of the carousel or slide region to include the current slide number or title when navigation occurs.
- III. Mark inactive slides with aria-hidden="true" and active slides as visible to prevent confusion and unwanted announcements.
- IV. Ensure carousel controls (Previous/Next) have proper accessible names so screen readers identify their function clearly.
- V. Maintain focus on the control that triggered the change and supplement with announcements so users know the carousel has updated.

**Refer to:**

<https://www.w3.org/WAI/ARIA/apg/patterns/carousel/examples/carousel-1-prev-next/>

<https://www.w3.org/WAI/tutorials/carousels/>

— Christine C

## ● WCAG 1.3.3 Sensory Characteristics (Level A) - Recommendation

### 1. Missing tooltip of informative icons

**Actual:** Tooltip is not defined for the Next and Previous button icons.

**Expected:** Tooltip should be defined for the Next and Previous button icons.

**Note:** Same issue repro for the social media icons defined in the footer section.

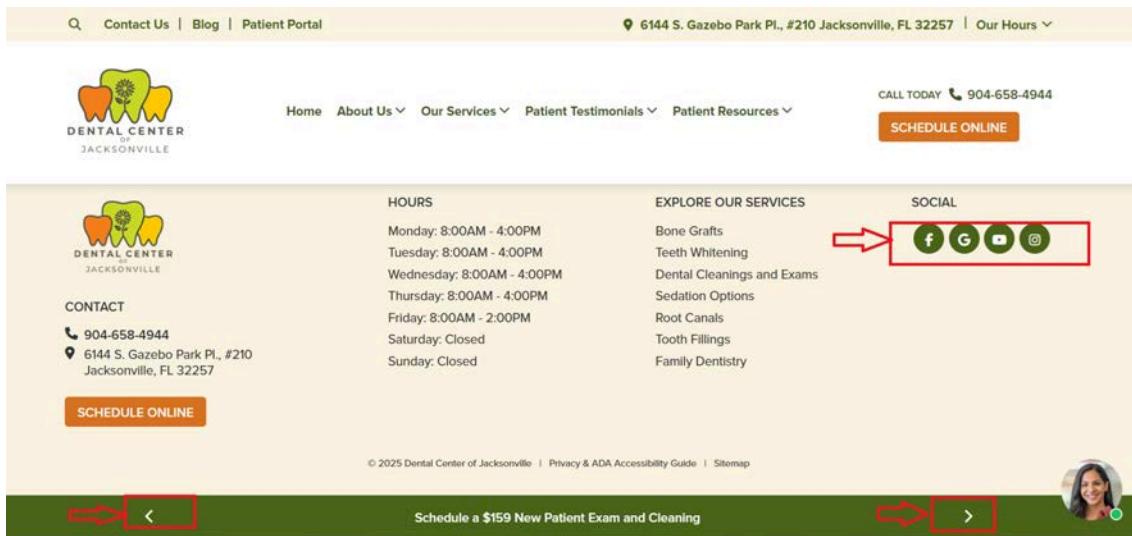

**Dev Recommendation:**

Make Tooltips Screen Reader and Keyboard Friendly:

- Tooltips must appear when the user focuses (with Tab) or hovers the icon.
- Tooltip text must be succinct, clearly describing the action (e.g., "Previous page").
- Tooltips should be dismissible and not interrupt navigation.

See the link for your reference:

[https://developer.mozilla.org/en-US/docs/Web/Accessibility/ARIA/Reference/Roles/tooltip\\_role](https://developer.mozilla.org/en-US/docs/Web/Accessibility/ARIA/Reference/Roles/tooltip_role)

- **WCAG 1.4.3 Contrast (Minimum) (Level AA) - Moderate**

1. **Insufficient contrast ratio for the text.**

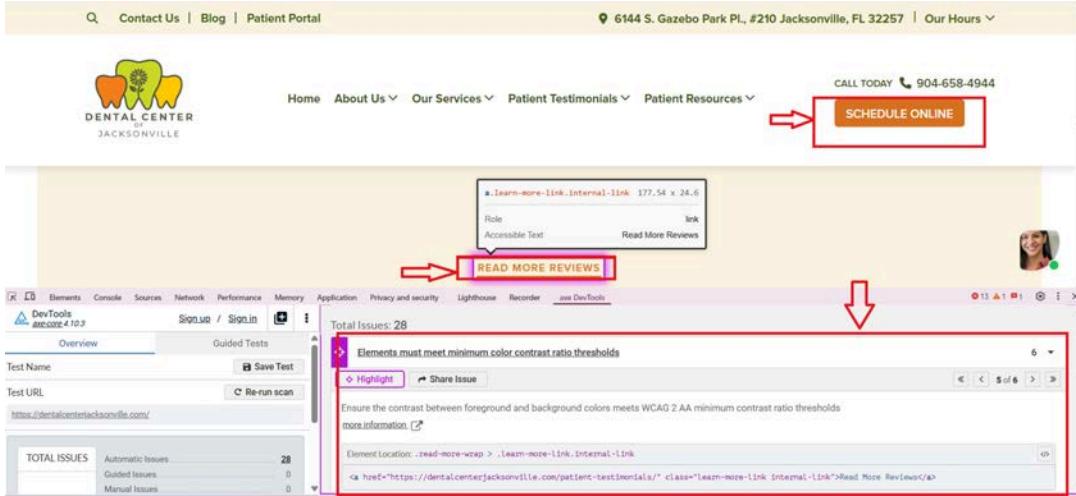

**Actual:** Element has insufficient color contrast of 3.28 (foreground color: #ffffff, background color: #d87325, font size: 12.8pt (17px), font weight: normal).

**Expected:** Contrast ratio for the text has a regular font size, so as per the WCAG, the color contrast ratio of the text should be at least 4.5:1.

**Dev Recommendation:** Use darker foreground color for the texts when to pass the color contrast ratio.

**Refer to:**

<https://www.w3.org/WAI/WCAG22/Understanding/contrast-minimum.html>

## 2. Insufficient contrast ratio for the text when the keyboard focus lands on it or hovers over it.

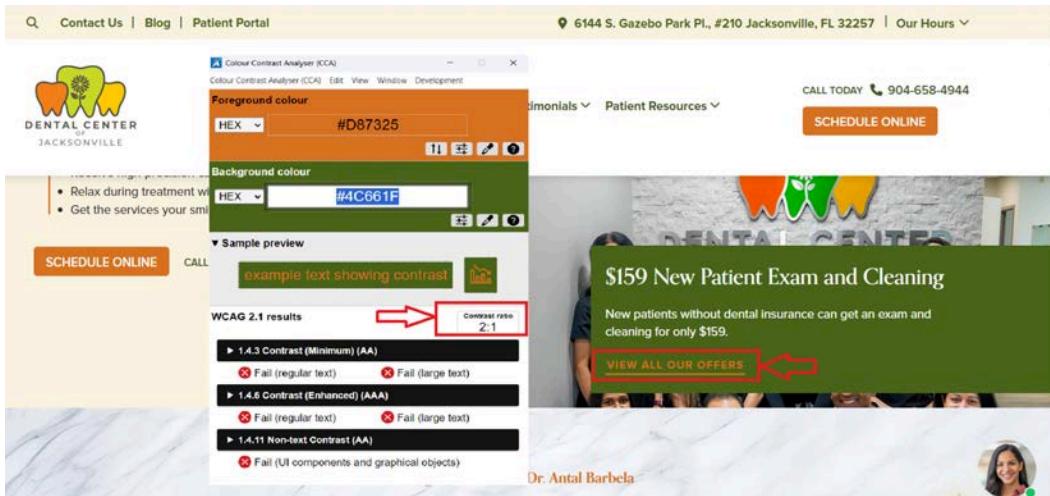

**Actual:** Contrast ratio for the texts having '#D87325' foreground color against '#4C661F' background color is measured to be at 2:1 when the keyboard focus lands on them or hovers on them, which fails the minimum requirement.

**Expected:** Contrast ratio for the texts has a regular font size, so as per the WCAG, the color contrast ratio of the text should be at least 4.5:1.

**Dev Recommendation:** Use a darker foreground color for the texts when keyboard focus lands on them or hovers on them to pass the color contrast ratio.

**Refer to:**

<https://www.w3.org/WAI/WCAG22/Understanding/contrast-minimum.html>

## 3. Insufficient contrast ratio for the placeholder text.

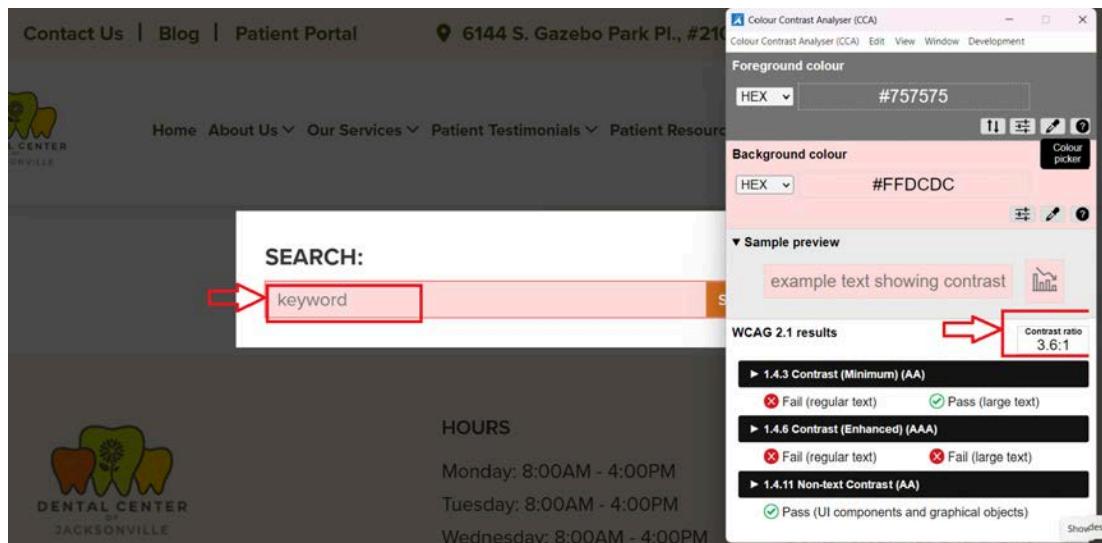

**Actual:** Contrast ratio for the placeholder value of search edit field placeholder text having '#757575' foreground color against '#FFDCDC' background color is measured to be at 3.6:1, which fails the minimum requirement.

**Expected:** The contrast ratio for the placeholder value of the search edit field has a regular font size, so, according to WCAG, the color contrast ratio of the text should be at least 4.5:1.

**Dev Recommendation:** Use a darker foreground color for the placeholder text to pass the color contrast ratio.

**Refer to:**

<https://www.w3.org/WAI/WCAG22/Understanding/contrast-minimum.html>

#### 4. Insufficient contrast ratio for the link text

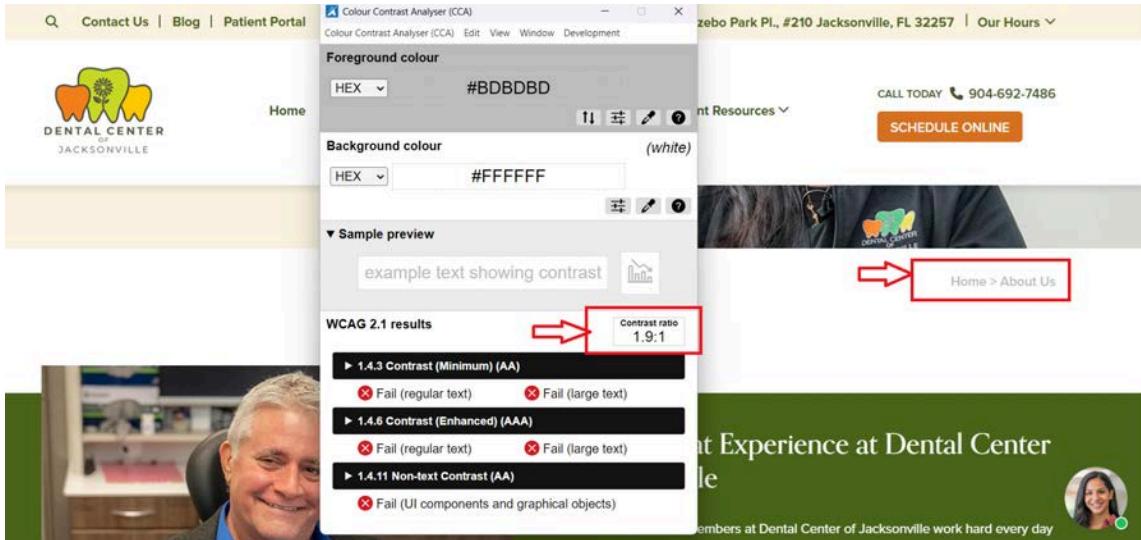

**Actual:** Contrast ratio for the grey color link texts having '#BDBDBD foreground color against '#FFFFFF' background color is measured to be at 1.9:1, which fails the minimum requirement.

**Expected:** Contrast ratio for the texts has a regular font size, so as per the WCAG, the color contrast ratio of the text should be at least 4.5:1.

**Dev Recommendation:** Use darker foreground color for the link texts to pass the color contrast ratio.

**Refer to:**

<https://www.w3.org/WAI/WCAG22/Understanding/contrast-minimum.html>

- [WCAG 1.4.1 Use of Color \(Level A\) - Moderate](#)

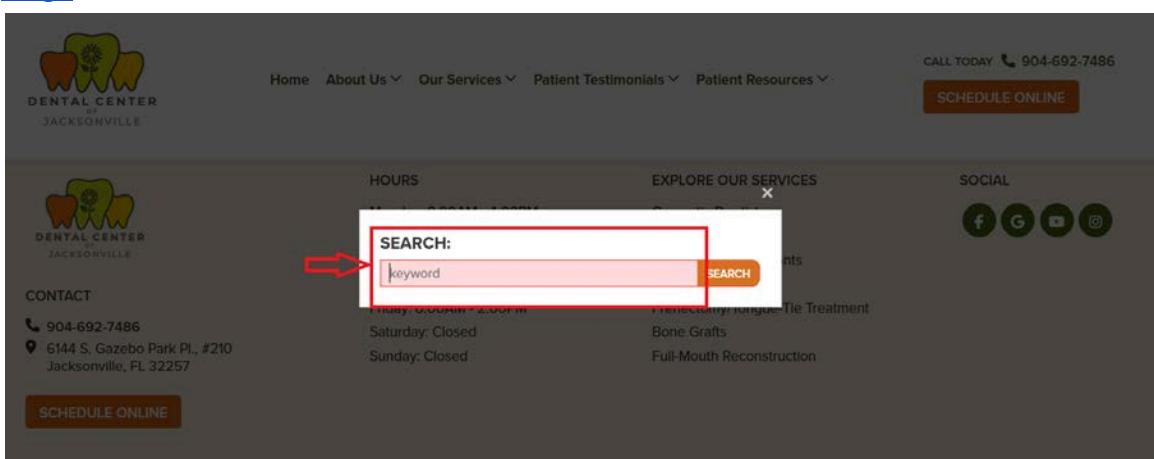

1. **Color is used to indicate the error.**

**Actual:** Error message is not defined for the edit field. We observed that the red color is used to indicate the error in the search edit field.

**Expected:** Error message should be defined for the edit fields.

**Dev Recommendation:** Ensures that the error message gets appeared after user leaves blank them and moves forward. Refer to:

[https://developer.mozilla.org/en-US/docs/Web/JavaScript/Reference/Global\\_Objects/Error/message](https://developer.mozilla.org/en-US/docs/Web/JavaScript/Reference/Global_Objects/Error/message)

- [WCAG 1.4.4 Resize text \(Level AA\) - Moderate](#)

## 1. Contents get hidden after resize.

**Actual:** Menu buttons are getting hidden after user resizes the page setting upto 200%.

**Expected:** Menu buttons should be visible even after resizing the page setting upto 200%.

**Note:** We also observed that the chat bot frame is getting truncated after resize.

Same issue repro after user resize the page setting upto 400%

**Dev Recommendation:** Use flexible layouts with relative units (% , em, rem) instead of fixed widths/heights (px). This allows elements and controls to resize and reflow smoothly without clipping or hiding content at higher zoom levels.

**Refer to:**

<https://www.w3.org/WAI/WCAG22/Understanding/resize-text.html>

The screenshot shows the homepage of the Dental Center of Jacksonville. At the top, there is a navigation bar with links for Contact Us, Blog, Patient Portal, address (6144 S. Gazebo Park Pl., #210 Jacksonville, FL 32257), Our Hours, Home, About Us, Our Services, Patient Testimonials, and Patient Resources. A red arrow points to the 'Patient Resources' link. Below the navigation, there is a section titled 'Commonly Asked Questions' with a question 'HOW OFTEN SHOULD I VISIT THE DENTIST?' followed by a detailed answer. Further down, there are two expandable sections: 'DO YOU TAKE MY INSURANCE?' and 'ARE YOU ACCEPTING NEW PATIENTS?'. In the center, there is a banner for a '\$49 New Patient Emergency Exam and X-ray'. To the right, a large orange button says 'SCHEDULE ONLINE'. On the left, there is a sidebar with links for Dental Veneers, Teeth Whitening, Smile Makeover, Tooth Bonding, Gum Reshaping, and Clear Aligners. A red box highlights the sidebar area. At the bottom, there is a chatbot interface with a message from Sam, an AI Patient Coordinator, and input fields for asking questions and connecting with staff or requesting an appointment. A red arrow points to the bottom right corner of the chatbot box.

- [WCAG 2.1.1 Keyboard \(Level A\) - Critical](#)

## 1. Elements not accessible through keyboard.

**Actual:** Interactive controls are not accessible through keyboard Tab key.

**Expected:** Interactive controls should be accessible through keyboard Tab key.

**Note:** Same issue repro for the hamburger menu button which appears at 200%.

Same issue repro for the 'close' button under the search dialog.

Same issue repro for the buttons under the 'Commonly Asked Questions' heading.

Same issue repro for the 'Load more' button defined on the page

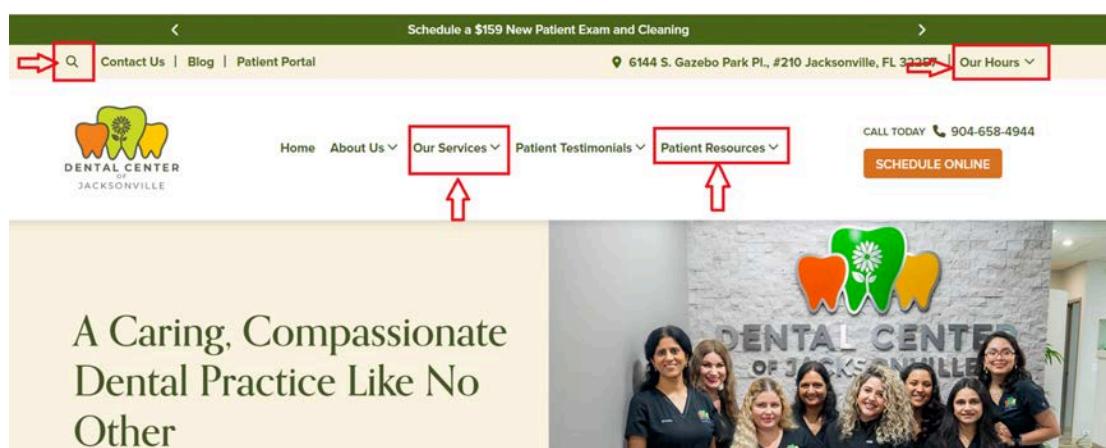

<https://dentalcenterjacksonville.com/patient-testimonials/>

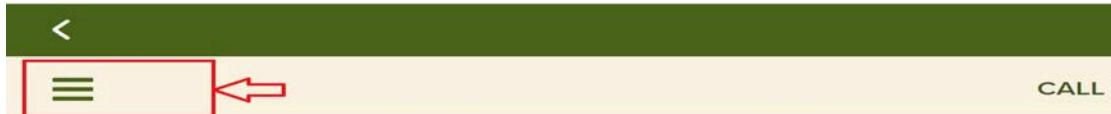

Same issue repro for most of the controls under the Book Appointment dialog

**Dev Recommendation:** Here are essential developer recommendations to resolve the issue and meet accessibility standards:

- I. Use Semantic HTML: Always use native HTML elements like <button>, <a href>, <input>, etc. Native elements are focusable and operable via keyboard by default.
- II. Ensure All Custom Controls Are Focusable: For non-semantic or custom interactive elements (like divs or spans that behave like buttons), add tabindex="0" to make them keyboard focusable.
- III. Implement Keyboard Event Handlers: Bind keyboard event listeners (e.g., for Enter and Space keys) so custom elements mimic native behavior.
- IV. Use tabindex="0" Carefully: Only add tabindex="0" to custom interactive elements. Avoid positive values (tabindex="1", etc.), as they can create confusing navigation.

Refer to: <https://www.a11y-collective.com/blog/keyboard-navigation/>

### Commonly Asked Questions

HOW OFTEN SHOULD I VISIT THE DENTIST?

Most patients should schedule dental checkups and professional cleanings every six months. However, some people may need more frequent visits, especially those with gum disease, a history of cavities, or other ongoing dental concerns. We'll recommend a personalized schedule based on your specific oral health needs.

DO YOU TAKE MY INSURANCE? +

ARE YOU ACCEPTING NEW PATIENTS? +

## 2. Missing Esc. functionality on modal dialog

**Actual:** Search dialog is not getting closed with the help of Esc key.

**Expected:** Search dialog should get closed with the help of Esc key.

**Note:** Same issue repro for the Book Appointment dialog

**Dev Recommendation:**

Add Keyboard Event Listener for Esc Key:

1. Attach a keydown event listener on the dialog or document that listens specifically for the Esc key (key code 27 or e.key === 'Escape').
2. When detected, trigger the dialog close function.

**Implement a Robust Dialog Close Function:**

1. The close function should hide the dialog, remove any overlays, and return keyboard focus to the element that opened the dialog.
2. Remove the Esc key event listener to avoid memory leaks or unintended behavior.

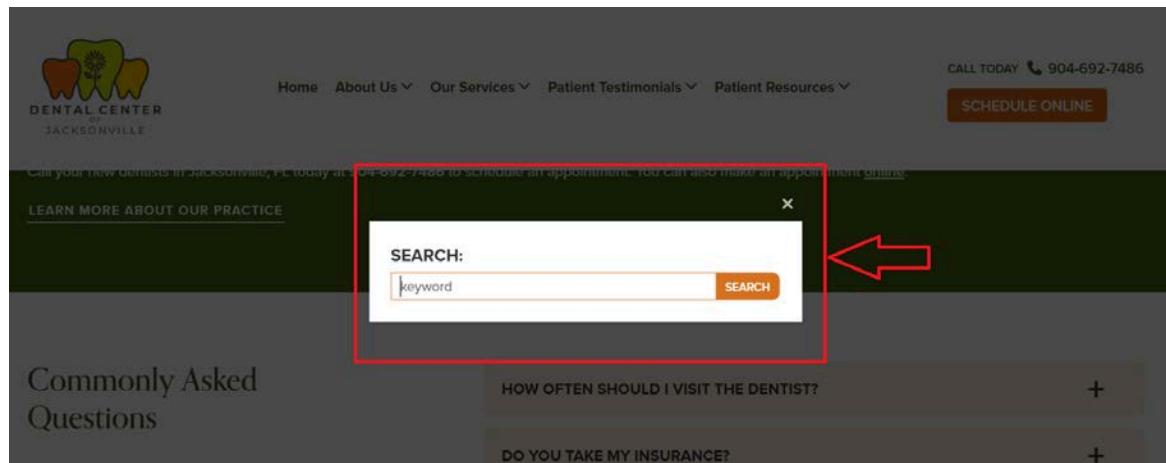

Set Focus Appropriately:

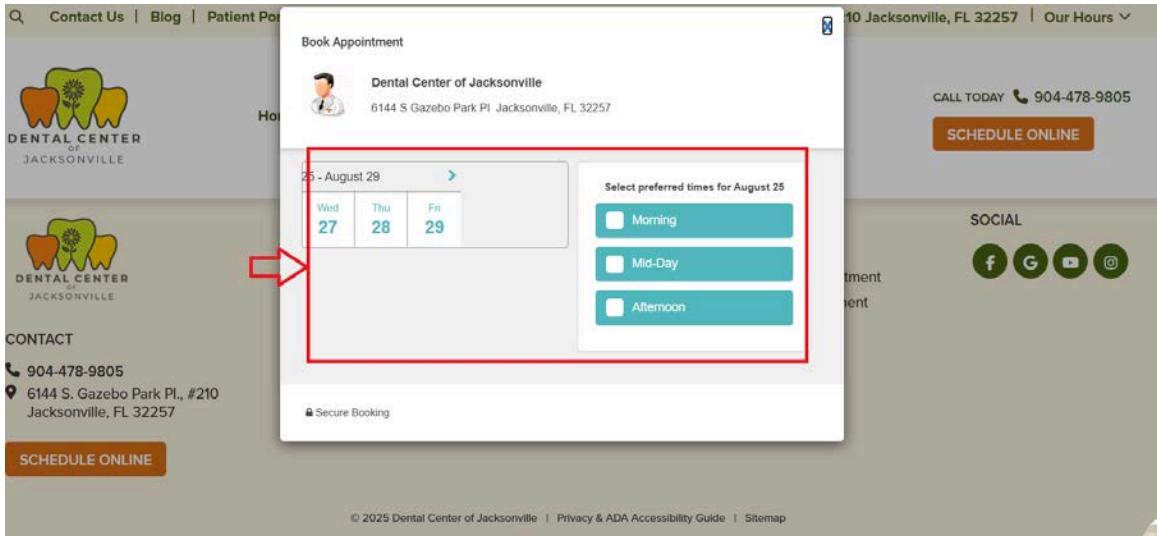

1. When the dialog opens, focus should be moved inside the dialog (e.g., to the first focusable element).
2. When the dialog closes (via Esc or close button), focus should return to the triggering element.

Use Native <dialog> if Possible:

1. The native HTML <dialog> element supports built-in modal behavior including closing via Esc key for modal dialogs opened with .showModal().
2. If using native dialogs, ensure to call .close() method and handle focus correctly.

Refer to: <https://allyjs.io/tutorials/accessible-dialog.html>

- **WCAG 2.2.2 Pause, Stop, Hide (Level A) - Significant**

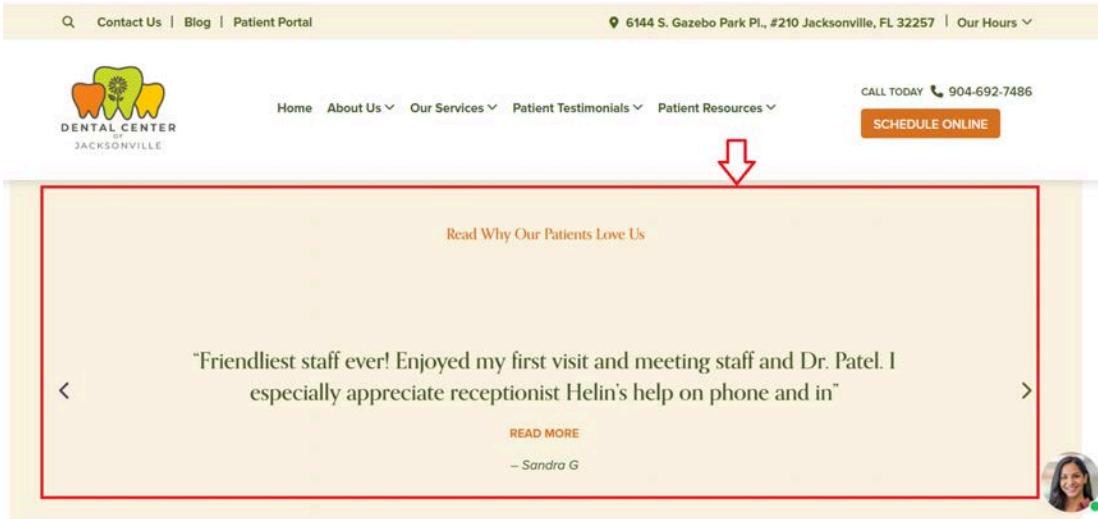

1. **Missing Play/Pause functionality on the moving carousels**

**Actual:** There is no functionality to Play/Pause & Stop the moving carousel slides.

**Expected:** Play/Pause functionality must be provided for the moving carousel slides.

**Dev Recommendation:**

- I. Add an accessible Play/Pause button for carousels that auto-play or move automatically to give users control to stop the motion.
- II. The button should have a clear and consistent aria-label (e.g., "Pause carousel", "Play carousel").
- III. Use the aria-pressed attribute to indicate the toggle state: true when paused, false when playing.
- IV. Connect the button to the carousel using aria-controls to establish the relationship.
- V. Ensure the button is keyboard accessible and visible on focus.
- VI. This improves accessibility by allowing users, especially those with cognitive or visual impairments, to pause distracting motion, complying with WCAG 2.2.2 (Pause, Stop, Hide)

## ● WCAG 2.4.1 Bypass Blocks (Level A) - Recommendation

### 1. Missing skip link to bypass the repetitive content.

**Actual:** 'Skip to main' link is not defined in the header section.

**Expected:** 'Skip to main' link should be defined in the header section.

**Dev Recommendation:**

**Add a Skip Link as the First Focusable Element:**

Place an anchor (<a>) with href targeting the id of your main content container before any navigation or logo in your header.

**Make the Link Visible on Focus:**

Use CSS so that the link is visible when it receives keyboard focus, and hidden/offscreen otherwise. This ensures keyboard and screen reader users can find and use it.

**Ensure Proper Focus Behavior:**

The main content area should have an id matching the skip link destination. Add tabindex="-1" to allow the main container to receive focus programmatically, which is required in some browsers.

**Text Should Be Clear:**

The link text should explicitly state its function, e.g., "Skip to main content."

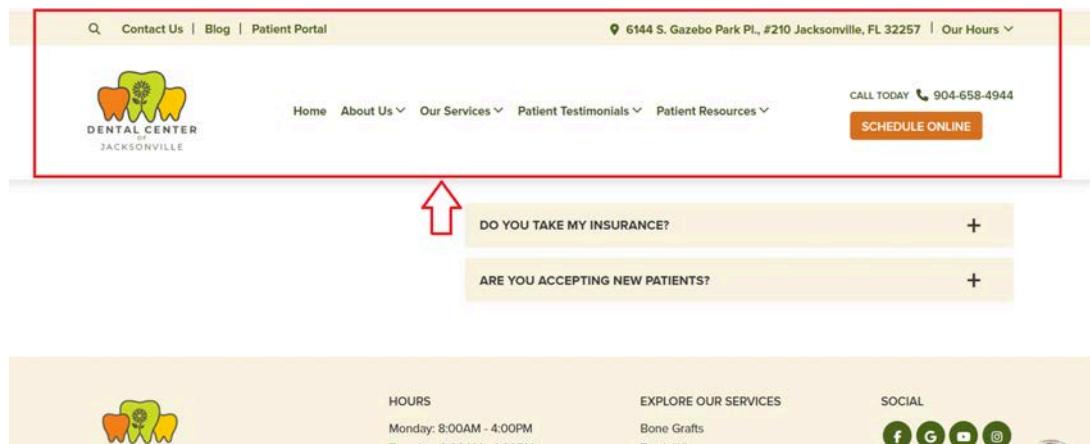

**Test With Keyboard:**

After implementation, verify you can Tab to the skip link when the page loads, activate it, and have focus immediately move to the main content area.

**Refers to:**

<https://www.w3.org/TR/WCAG20-TECHS/G1.html>

<https://www.jimthatcher.com/skipnav.htm>

## 2. Missing navigation landmark on breadcrumb

**Actual:** Links available under the breadcrumb are not defined under the navigation landmark.

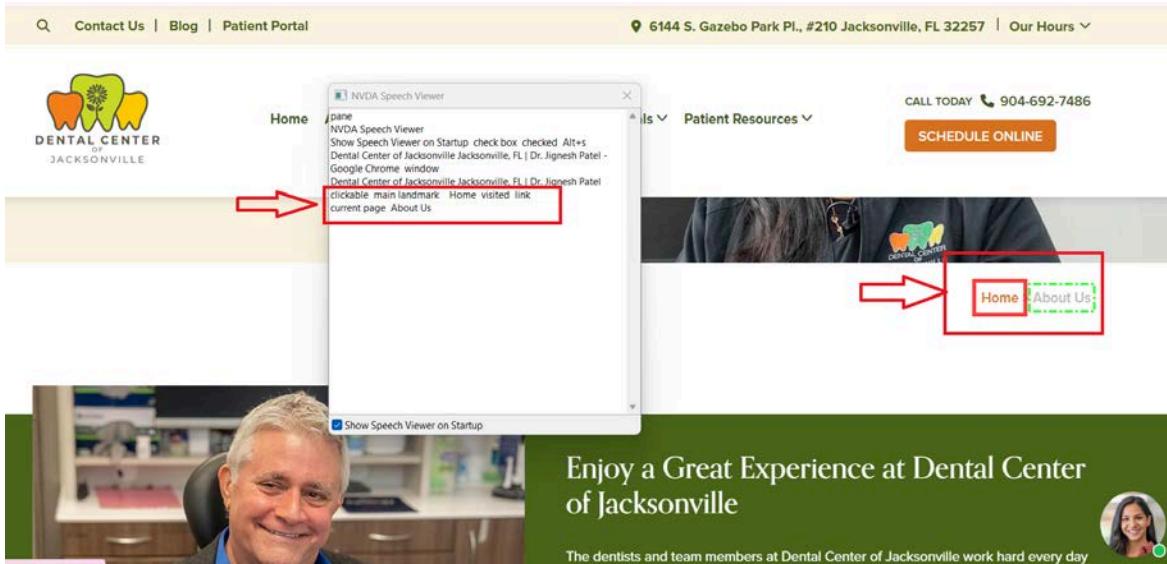

**Expected:** Links available breadcrumb should be defined under the navigation landmark. Also a proper accessible name as 'breadcrumb' should be defined on it.

**Dev Recommendation:**

Wrap the breadcrumb trail in a `<nav>` element with an `aria-label="breadcrumb"` to define it as a navigation landmark for assistive technologies.

Use a semantic list structure (`<ol>` or `<ul>`) inside the nav to mark up the breadcrumb items properly.

Refer to: <https://www.w3.org/WAI/ARIA/apg/patterns/breadcrumb/examples/breadcrumb/>

- **WCAG 2.4.3 Focus Order (Level A) - Significant**

1. **Keyboard focus is not in logical order**

**Actual:** Keyboard focus is not in logical order on the carousel slides when users navigate through Tab key. We observed that the keyboard focus lands on all the slides instead of only on the visible slide through Tab key.

**Expected:** Keyboard focus should be in logical order on the carousel slides when users navigate through Tab key. Ideally, keyboard focus should land only on the visually appearing slide through Tab key.

**Note:** Same issue repro for the carousel slides under the 'Read Why Our Patients Love Us' heading when user navigates with the help of screen reader browse mode.

**Dev Recommendation:**

- I. Ensure the DOM order matches the visual order so tabbing follows a logical sequence through the carousel controls and slides.
- II. Keep keyboard focus on the control that triggered the slide change (e.g., Next/Previous button) rather than moving it unexpectedly.
- III. Make only visible slides and interactive elements focusable; hide inactive slides with `aria-hidden="true"` and remove them from the tab order using `tabindex="-1"`.
- IV. Enable arrow key support for navigating between slides when using a tabbed interface.
- V. Avoid keyboard traps by allowing smooth tab navigation in and out of the carousel.

**Refer to:**

<https://www.w3.org/WAI/ARIA/apg/patterns/carousel/examples/carousel-1-prev-next/>

<https://www.a11y-collective.com/blog/accessible-carousel/>

The screenshot shows a website for 'DENTAL CENTER JACKSONVILLE'. At the top, there's a green banner with a left arrow, a central logo, and a right arrow. Below it is a navigation bar with links for 'Contact Us', 'Blog', 'Patient Portal', 'Home', 'About Us', 'Our Services', 'Patient Testimonials', 'Patient Resources', 'CALL TODAY 904-692-7486', and 'SCHEDULE ONLINE'. A large image of three dental professionals is displayed. To the right of the image is a screenshot of the NVDA Speech Viewer tool showing a list of links. Red arrows point from specific elements on the main page to the NVDA viewer, illustrating how screen readers interpret the page structure.

A Caring, Compassionate Dental Practice Like No Other

At Dental Center of Jacksonville, we combine expert care with an emphasis on comfort, creating a warm and welcoming environment. From teeth cleanings to

Read Why Our Patients Love Us

"Very friendly and professional. A dentist who cares first about your dental health."

– Christine C

- [\*\*WCAG 2.4.4 Link Purpose \(In Context\) \(Level A\) - Recommendation\*\*](#)

### 1. Link not descriptive.

**Actual:** Read more links are not descriptive.

**Expected:** 'Read more' link should be more descriptive. It should be defined as 'Read more about Dr. Jignesh Patel'.

**Note:** Same issue repro for the 'View offer details' links available on the page

<https://dentalcenterjacksonville.com/specials-promotions/>

Same issue repro for the 'Read more' links available on the page

<https://dentalcenterjacksonville.com/blog/>

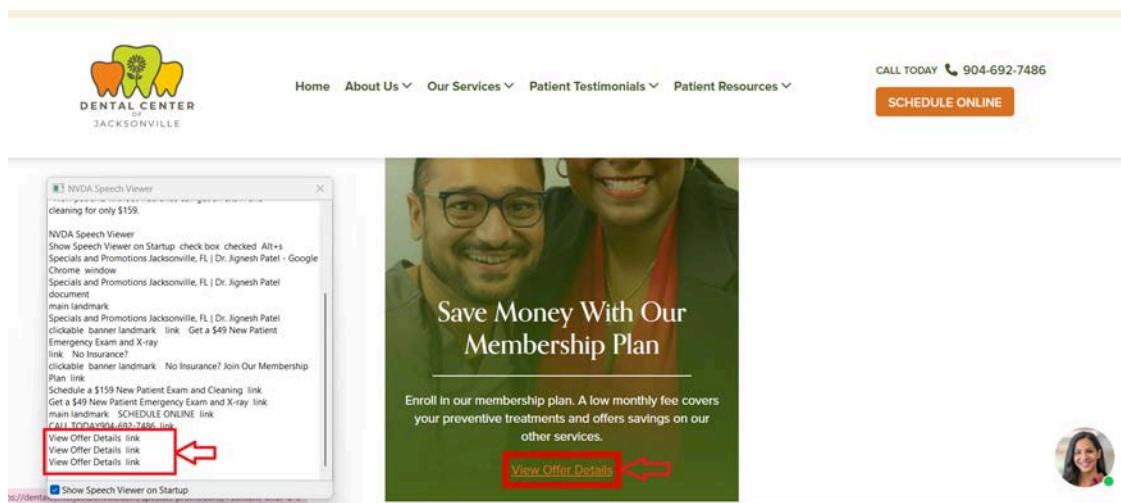

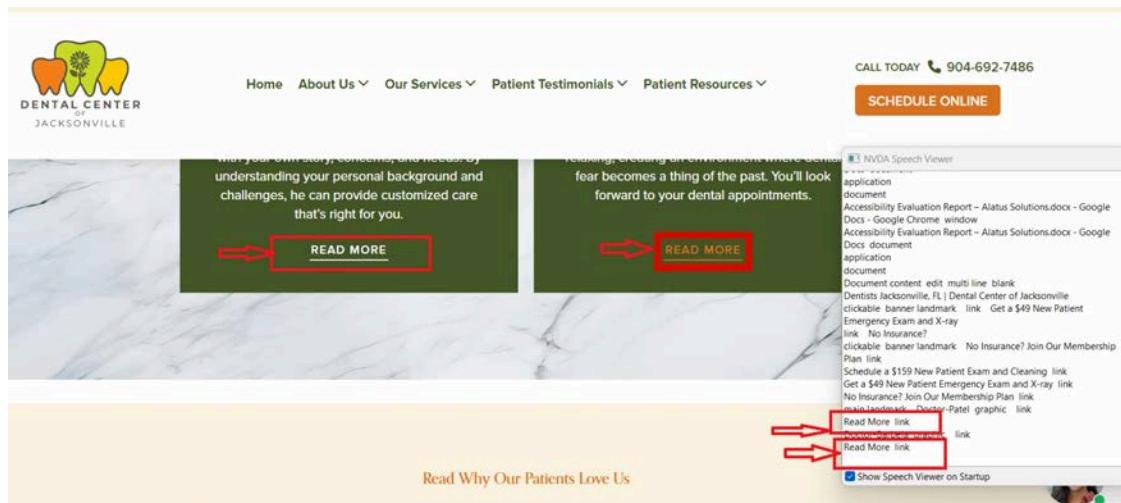

## Dev Recommendation:

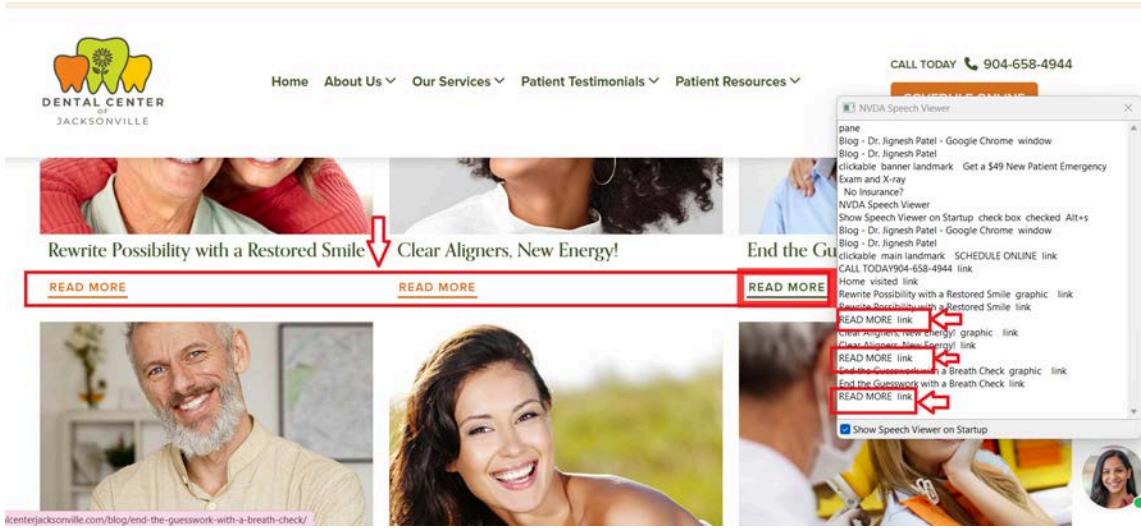

- I. Use clear, specific text in each link that describes its purpose or destination, such as “Download annual report” or “View accessibility policy”—not vague phrases like “click here” or “read more”.
- II. Ensure link text makes sense when read out of context, helping screen reader users who jump directly between links.
- III. Avoid using raw URLs as visible link text; use meaningful phrases instead.
- IV. Give each link unique text to avoid confusion and improve navigation.

### Refer to:

<https://www.w3.org/WAI/WCAG22/Understanding/link-purpose-in-context.html>

<https://developer.mozilla.org/en-US/docs/Web/Accessibility/ARIA/Reference/Attributes/aria-label>

## ● WCAG 2.4.6 Headings and Labels (Level AA) - Recommendation

### 1. Visually appearing headings not defined programmatically

**Actual:** Visually appearing headings such as Read Why Our Patients Love Us, Our Featured Services, All Dental Services etc. are not defined programmatically.

**Expected:** Ideally visually appearing headings must be defined programmatically also within proper heading tags.

**Note:** Same issue repro on the following pages:

<https://dentalcenterjacksonville.com/about-us/tour-the-office/>

<https://dentalcenterjacksonville.com/patient-testimonials/>

<https://dentalcenterjacksonville.com/specials-promotions/>

<https://dentalcenterjacksonville.com/blog/stronger-smiles-start-now-with-dental-implants/>

#### Dev Recommendation:

- I. Mark up all visual headings using native HTML heading tags (`<h1>` to `<h6>`), not just by styling text with CSS or using bold font.
- II. Maintain a meaningful and logical hierarchy in heading levels, reflecting the content structure for easy navigation.
- III. If native heading tags can't be used, apply ARIA attributes: `role="heading"` with a relevant `aria-level`, but always prefer native headings first.
- IV. Avoid using non-heading elements (like `<div>` or `<p>`) for headings unless ARIA is used as a last resort.

**Refer to:** <https://www.tpgi.com/headings-accessibility/>

<https://www.a11yproject.com/posts/how-to-accessible-heading-structure/>

Cleoprise B.

The screenshot shows the homepage of the Dental Center of Jacksonville. At the top, there is a navigation bar with links to Home, About Us, Our Services, Patient Testimonials, and Patient Resources. To the right of the navigation is a phone icon followed by the number 904-658-4944, and a button labeled "SCHEDULE ONLINE". On the left side, there is a section titled "Offers" with a red arrow pointing down to a box labeled "Limited-Time Specials". Inside this box, there is a paragraph about patient value and current specials, followed by a "SCHEDULE ONLINE" button and a "CALL TODAY" link. Below this, there are two photographs of smiling patients: a woman on the left and a man on the right. A red box highlights the text "\$159 New Patient Exam and Cleaning" next to the woman's photo, and another red box highlights the text "\$49 New Patient Emergency Exam and X-ray" next to the man's photo. Both boxes mention that new patients without insurance can get the service for the listed price.

The screenshot shows the homepage of the Dental Center of Jacksonville. At the top, there is a navigation bar with links to Home, About Us, Our Services, Patient Testimonials, and Patient Resources. To the right of the navigation is a phone icon followed by the number 904-658-4944, and a button labeled "SCHEDULE ONLINE". In the center, there is a section titled "Read Our Latest Blog Posts" with a red arrow pointing to it. Below this, there are three photographs of smiling patients: a couple on the left, a woman in the middle, and a couple on the right. A red box highlights the text "Rewrite Possibility with a Restored Smile" next to the couple on the left, "Clear Aligners. New Energy!" next to the woman in the middle, and "End the Guesswork with a Breath Che..." next to the couple on the right. Each highlighted text has a red arrow pointing to it.

- **WCAG 2.4.7 Focus Visible (Level AA) - Critical**

1. **Keyboard focus indicator is not visible properly**

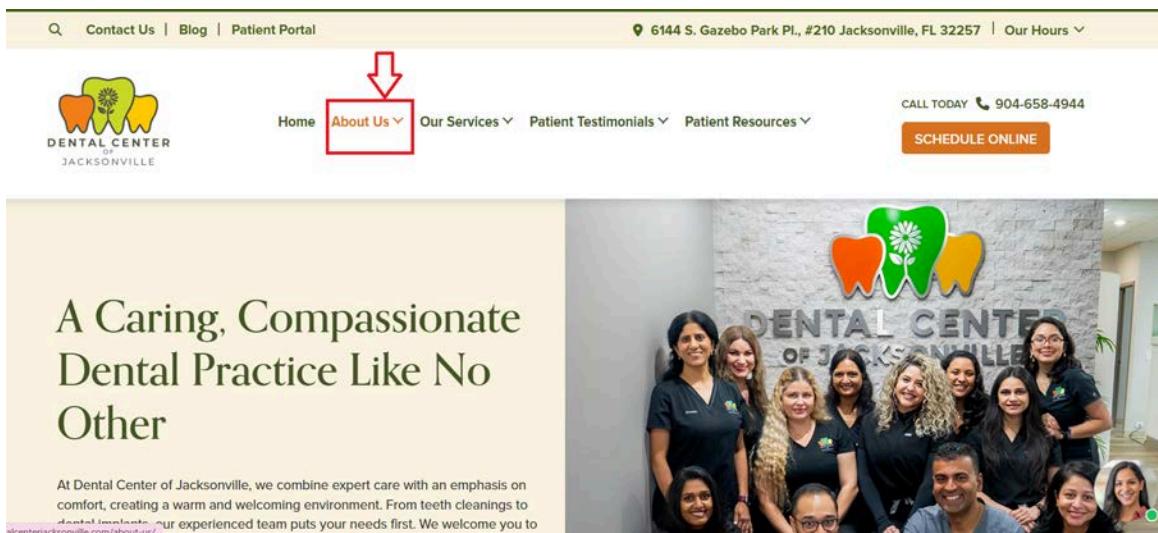

**Actual:** Keyboard focus is not visible properly on the interactive elements when users navigate through Tab key. Observed that the controls get highlighted as soon as the keyboard focus lands on them.

**Expected:** Keyboard focus should be visible properly on the interactive elements when users navigate through Tab key.

**Dev Recommendation:** Avoid 'outline:0' or 'outline:none' or other styles that remove or limit the visibility of keyboard focus indicators. Alternatively, A custom highly visible focus indicator should be provided using a 'border' or 'outline' property that should have a 3:1 color contrast ratio with the background.

**Refer to:**

<https://www.w3.org/TR/UNDERSTANDING-WCAG20/navigation-mechanisms-focus-visible.html>

## 2. Keyboard focus indicator is not visible

**Actual:** Keyboard focus is not visible on the interactive elements such as 'Dental Center of Jacksonville' logo, '904-658-4944' & Author link images when users navigate through Tab key.

**Expected:** Keyboard focus indicator should be visible on the interactive elements when users navigate through Tab key.

**Note:** Same issue repro for the 'View all offers' link available on the

<https://dentalcenterjacksonville.com/general-dentistry/> page.

**Dev Recommendation:** Avoid 'outline:0' or 'outline:none' or other styles that remove or limit the visibility of keyboard focus indicators. Alternatively, A custom highly visible focus indicator should be provided using a 'border' or 'outline' property that should have a 3:1 color contrast ratio with the background.

[VIEW ALL OUR OFFERS](#)

### ● WCAG 4.1.2 Name, Role, Value (Level A) - Significant

#### 1. Missing accessible name for the buttons.

**Actual:** Accessible name is not defined for the Previous and Next buttons.

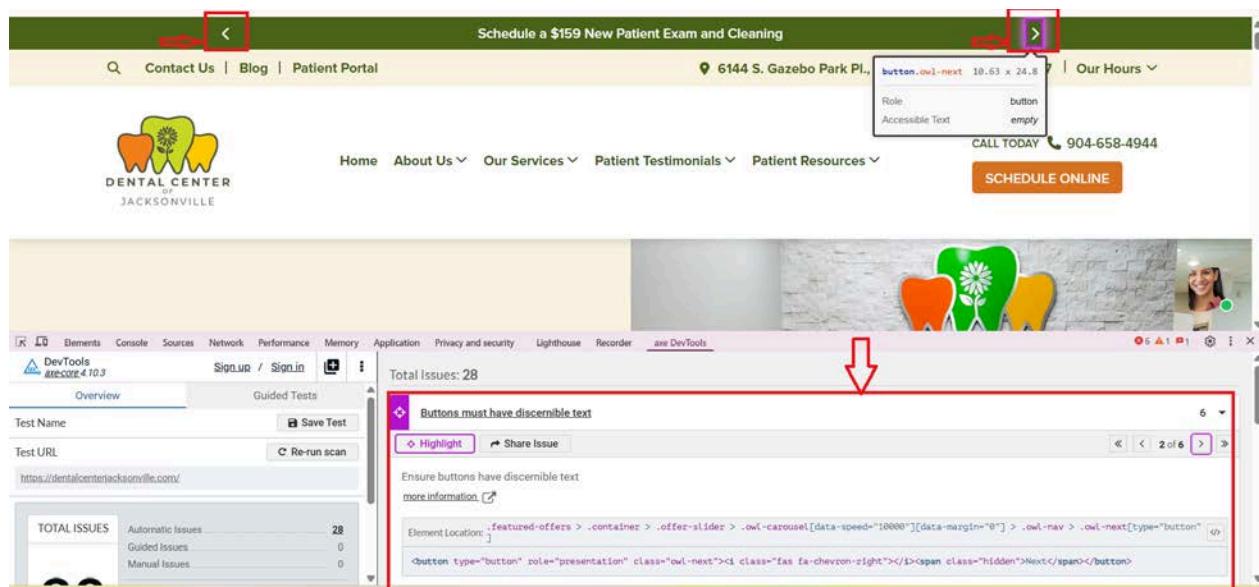

**Expected:** Accessible name should be defined for the Previous and Next buttons.

**Dev Recommendation:** Use aria-label, aria-labelledby property, or <label> tag to define the accessible name of the buttons. Refer to:

<https://developer.mozilla.org/en-US/docs/Web/Accessibility/ARIA/Reference/Attributes/aria-label>

<https://developer.mozilla.org/en-US/docs/Web/Accessibility/ARIA/Reference/Attributes/aria-labelledby>

<https://www.w3.org/WAI/ARIA/apg/practices/names-and-descriptions/>

## 2. Missing accessible name for the frame.

**Actual:** Accessible name is not defined for the frame used in the page

**Expected:** Ensure <iframe> and <frame> elements have an accessible name.

**Dev Recommendation:** Use aria-label to define the accessible name of the buttons. Refer to:

<https://developer.mozilla.org/en-US/docs/Web/Accessibility/ARIA/Reference/Attributes/aria-label>

<https://accessibilityinsights.io/info-examples/web/frame-title/>

The screenshot shows the Dental Center Jacksonville website. At the top right, there is a call-to-action button "CALL TODAY 904-658-4944" and a "SCHEDULE ONLINE" button. Below these is a pink-bordered box containing a message from an AI patient coordinator named Sam. A red arrow points to this box. In the bottom left corner of the main content area, there is a "READ MORE REVIEWS" button. The bottom half of the screenshot shows the Chrome DevTools "axe-core 4.10.3" audit results. A red box highlights an issue: "Frames must have an accessible name". The issue details say: "Ensure <iframe> and <frame> elements have an accessible name" and "Element Location: #chat-frame". A red arrow points to this issue in the DevTools results.

### 3. Irrelevant role defined for the elements.

**Actual:** ARIA role presentation is defined for given elements.

**Expected:** Ensure role attribute has an appropriate value for the element.

**Dev Recommendation:** Remove extra role="presentation" for the button tag to resolve the issue. Refer to: <https://www.w3.org/WAI/ARIA/apg/patterns/button/examples/button/>

The screenshot shows the Dental Center Jacksonville website. At the top right, there is a call-to-action button "CALL TODAY 904-658-4944" and a "SCHEDULE ONLINE" button. Below these is a pink-bordered box containing a message from an AI patient coordinator named Sam. A red arrow points to this box. In the bottom left corner of the main content area, there is a search bar with a magnifying glass icon. A red box highlights an issue: "ARIA role should be appropriate for the element". The issue details say: "Ensure role attribute has an appropriate value for the element" and "Element Location: .featured-offers > .container > .offer-slider > .owl-carousel[data-speed='10000'][data-margin='0'] > .owl-nav > .owl-prev[type='button']". A red arrow points to this issue in the DevTools results.

### 4. Missing accessible name and role of the modal dialog.

**Actual:** Accessible name and role is not defined for the search modal dialog.

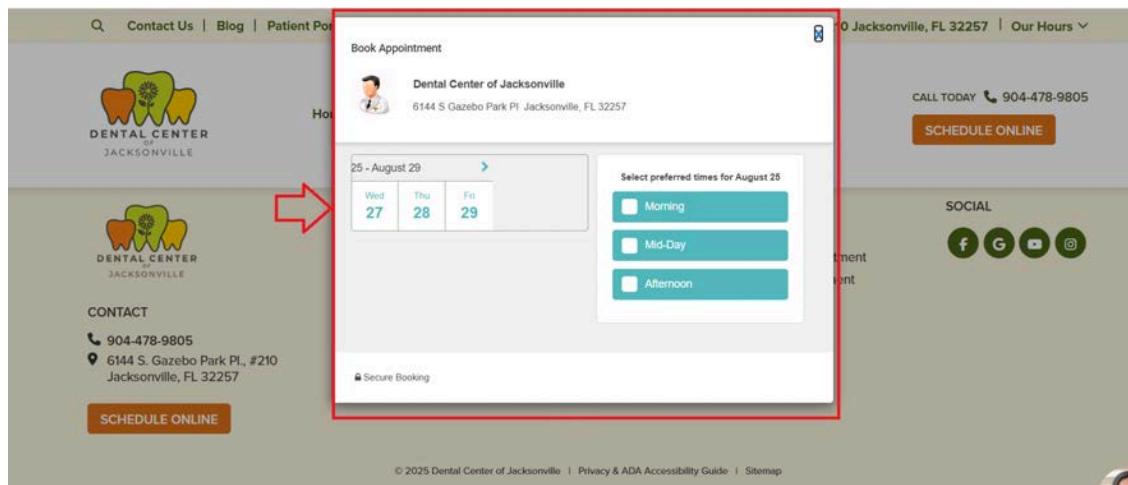

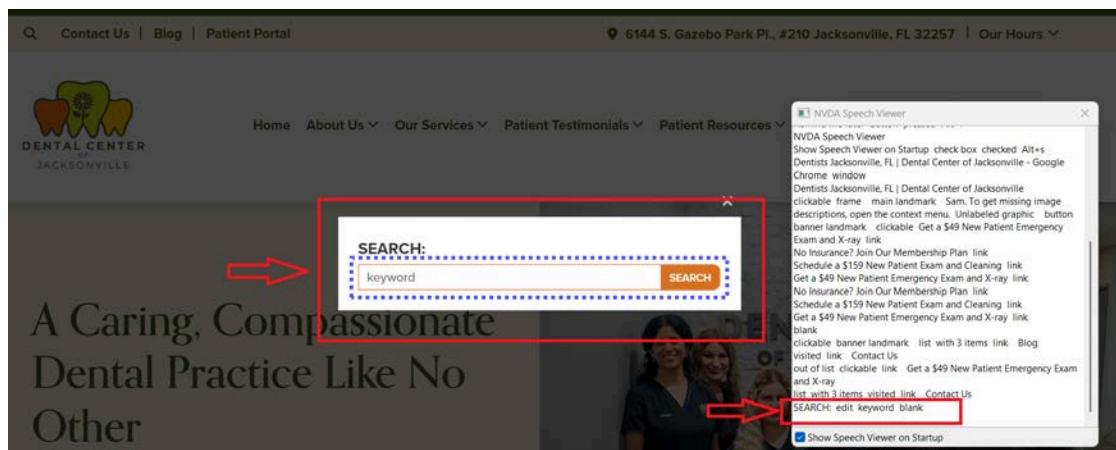

**Expected:** Accessible name and role should be defined for the search modal dialog.

**Note:** Same issue repro for the Book Appointment dialog

**Dev Recommendation:** Add role="dialog" or role="alertdialog" to the modal container to inform assistive technologies that it is a dialog window.

- I. Provide an accessible name via either:
  - aria-labelledby referencing an element (e.g., a heading inside the modal) that contains the dialog's title or name, or
  - aria-label with descriptive text naming the dialog if no visible title exists.
- II. Use aria-modal="true" to indicate that the dialog is modal and interaction with the background content is disabled.
- III. Ensure keyboard focus is moved into the dialog when it opens and trapped inside until it closes.

Refer to: <https://www.w3.org/WAI/ARIA/apg/patterns/dialog-modal/examples/dialog/>

## 5. Missing role and state of accordion buttons

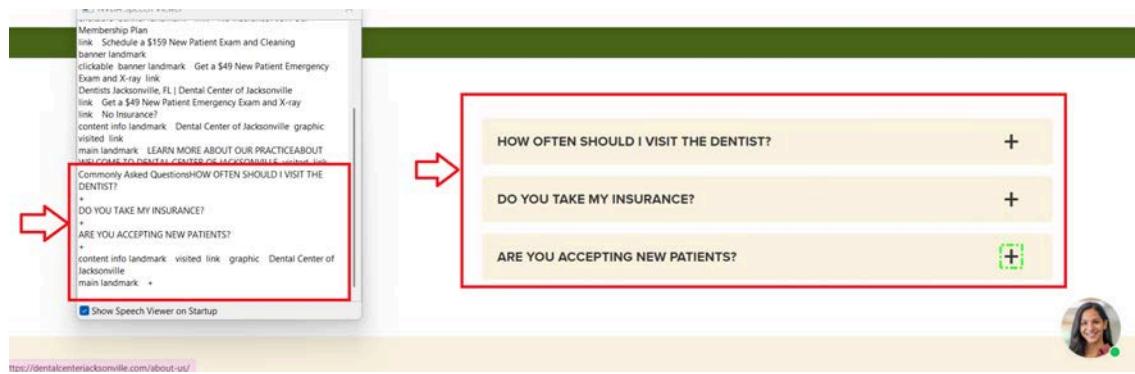

**Actual:** Role and state is not defined for the buttons under the 'Commonly Asked Questions' heading.

**Expected:** Role and state should be defined for the accordion buttons.

**Dev Recommendation:**

- I. Use native <button> elements for accordion headers to ensure they are keyboard accessible and announced correctly by screen readers.
- II. Assign aria-expanded="true" or "false" on each button to indicate the expanded/collapsed state of the associated panel.
- III. Use aria-controls on the button to reference the ID of the corresponding accordion panel it controls.
- IV. Ensure each controlled panel has an id matching the button's aria-controls and uses aria-labelledby referencing the button's ID.
- V. Dynamically update aria-expanded when the accordion is toggled (opened or closed).
- VI. Support keyboard interactions such as Enter/Space to toggle, and optionally Up/Down arrow keys and Home/End to navigate among accordion headers.
- VII. Use unique IDs and meaningful, descriptive labels for buttons and panels.

**Refer to:** <https://www.w3.org/WAI/ARIA/apg/patterns/accordion/examples/accordion/>

## 6. Incorrect name defined for the social media controls

**Actual:** Incorrect name as 'fab fa-facebook-f' is defined for the facebook button.

**Expected:** Correct name as per the social media controls should be defined for them.

Note: Same issue repro with the other social media controls

**Dev Recommendation:**

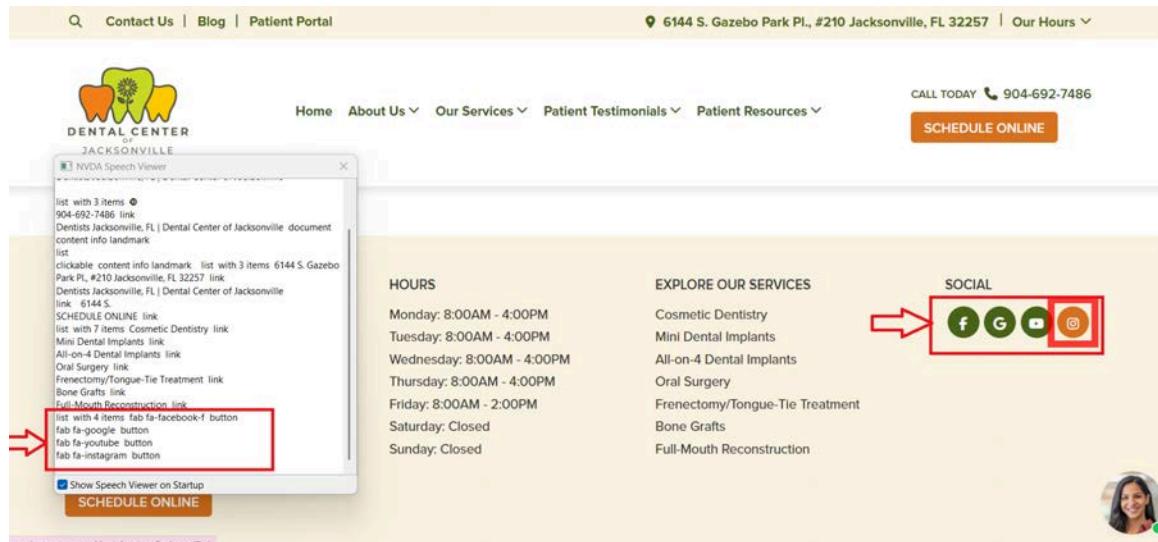

- I. Provide clear, descriptive accessible names for each social media button, such as "Visit our Facebook page" or "Follow us on Twitter."
- II. Use visible text labels alongside the icons where possible. If the button contains only an icon, add a meaningful aria-label attribute describing the button's purpose.
- III. Avoid empty links or icon-only buttons without accessible names, as screen readers will not convey their function properly.

- IV. Ensure labels are concise yet informative, and do not include the word “button” since screen readers announce the role automatically.
- V. Test social media buttons with screen readers to confirm that the accessible names are correctly announced.

**Refer to:**

<https://sproutsocial.com/insights/social-media-accessibility/>

<https://www.boia.org/blog/check-your-websites-social-media-icons-for-this-common-accessibility-error>

## 5. Page-Specific Issues

Use this section for accessibility barriers that are unique to one specific page or workflow. These issues do not repeat across multiple areas.

### Home

<https://dentalcenterjacksonville.com/>

#### 1. Content doesn't adapt text spacing. [WCAG 1.4.12 Text Spacing \(Level AA 2.1 only\)](#) - Moderate

**Actual:** Learn more link is getting overlapped with the paragraph after user applying text spacing.

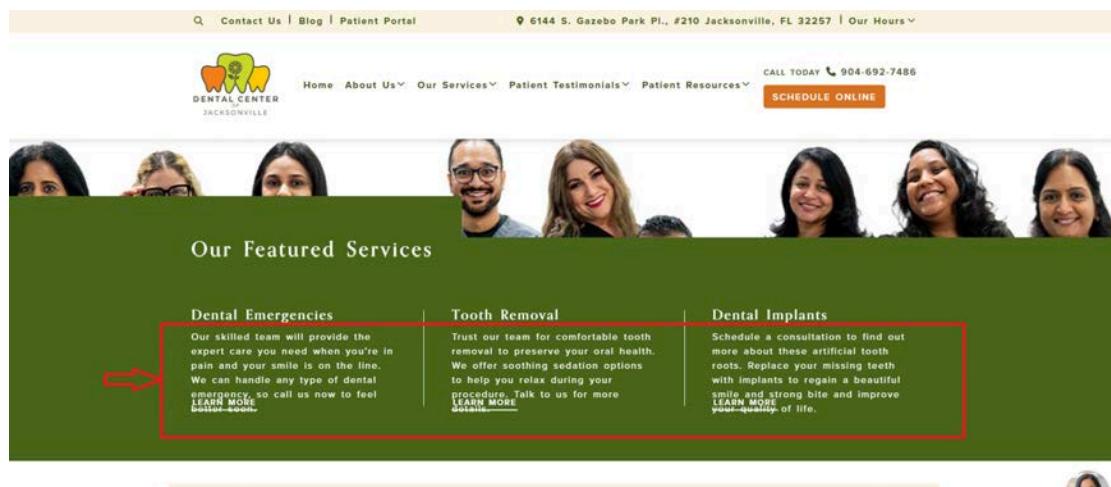

**Expected:** Content should not overlap with the background text after user applies text spacing.

**Dev Recommendation:**

- I. Use relative units (em, rem, %) for margins, padding, and spacing instead of fixed pixels to allow links and paragraphs to reflow properly when text spacing changes.

- II. Ensure sufficient CSS margin or padding is set between the paragraph and "Learn more" link so extra spacing does not cause overlap.
- III. Avoid negative margins or absolute positioning that may prevent content from adjusting dynamically.
- IV. Test with increased spacing (letter-spacing, word-spacing, line-height, paragraph spacing) as recommended by WCAG (1.5x line height, 0.12x letter spacing, etc.), and adjust styles to provide enough separation under those conditions.
- V. Consider using flexbox or grid layouts for containers holding links and paragraphs to enhance reflow and avoid overlap issues.

**Refer to:** [https://webaim.org/techniques/hypertext/link\\_text](https://webaim.org/techniques/hypertext/link_text)

## 2. Accessible name is not same as the visible name for links. [WCAG 2.5.3 Label in Name \(Level A 2.1 only\)](#) - Moderate

**Actual:** Accessible name is not the same as the visible name for the Learn more link.

**Expected:** Accessible name should be same as the visible name for the Learn more link and should be descriptive.

**Dev Recommendation:** Use proper aria-label attribute for the Learn more links. Refer to:

<https://www.w3.org/WAI/WCAG22/Understanding/label-in-name>

<https://www.w3.org/WAI/WCAG22/Understanding/link-purpose-in-context.html>

<https://developer.mozilla.org/en-US/docs/Web/Accessibility/ARIA/Reference/Attributes/aria-label>

### 3. Missing role for the button. [WCAG 4.1.2 Name, Role, Value \(Level A\)](#) - Significant

**Actual:** Role is not defined for the Read more button.

**Expected:** Role as button must be defined for the Read more button.

**Dev Recommendation:**

- I. Always use native <button> elements—they have an implicit role, keyboard access, and built-in accessibility by default.
- II. If a non-button element (like <div>, <span>, or <a>) is used as a button, add role="button" and make it focusable with tabindex="0".
- III. Implement keyboard event handlers for Enter and Space keys so the element responds to all expected button interactions.
- IV. Ensure the button has a clear accessible name via inner text or an aria-label

**Refer to:**

[https://developer.mozilla.org/en-US/docs/Web/Accessibility/ARIA/Reference/Roles/button\\_role](https://developer.mozilla.org/en-US/docs/Web/Accessibility/ARIA/Reference/Roles/button_role)

#### 4. Incorrect role defined for button. [WCAG 4.1.2 Name, Role, Value \(Level A\) - Significant](#)

**Actual:** Incorrect role as link is defined for the Read transcript button.

**Expected:** Role as button should be defined for the Read transcript button.

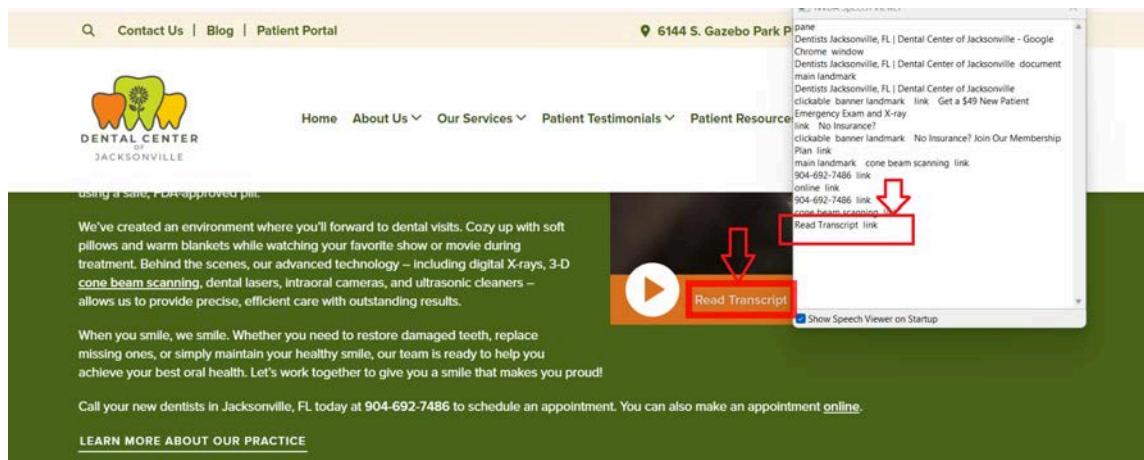

**Note:** Same issue repro for the schedule online button

**Dev Recommendation:**

- I. Use the correct semantic element: if the control triggers an action (like opening or downloading the transcript), it should be a <button> element, not a link.
- II. If using a non-button element, ensure to assign role="button" and implement keyboard support (Space and Enter keys) to behave like a button.
- III. Avoid assigning role="link" to an element that performs an action rather than navigation, as it misleads assistive technologies and users.
- IV. Provide an accessible name (via inner text or aria-label) that clearly describes the button's function.

**Refer to:**

[https://developer.mozilla.org/en-US/docs/Web/Accessibility/ARIA/Reference/Roles/button\\_role](https://developer.mozilla.org/en-US/docs/Web/Accessibility/ARIA/Reference/Roles/button_role)

### 1. Button overlaps with the background button. Best Practice - Recommendation

**Actual:** Read Transcript button overlaps with the play button.

**Expected:** Read Transcript button should not overlap with the play button.

**Dev Recommendation:**

Ensure buttons have sufficient spacing and padding using relative units to prevent overlap with other buttons or background elements.

Avoid using positioning (absolute, fixed) that causes buttons to stack or visually collide with backgrounds or other controls.

Maintain the minimum size and touch target (at least 44x44 CSS pixels) for buttons to ensure usability and avoid visual overlap.

SCHEDULE ONLINE

Lauderdale, he chose to practice in Jacksonville, where he and his wife now live. His dedication to excellence drives him to continually expand his dental expertise, so his patients receive the highest quality care.

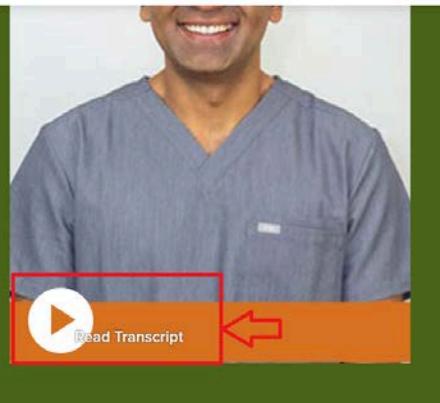

At the heart of Dr. Patel's practice is a patient-first approach. He understands that each person who visits his office is unique, with their own story, concerns, and needs. Rather than taking a one-size-fits-all approach, he takes time to understand each patient's background, dental history, and anxiety levels.

Understanding that dental anxiety can stem from early experiences, Dr. Patel has created a welcoming, comfortable environment where patients can feel relaxed and confident about their care. He evaluates each patient's comfort level at every visit, ensuring a positive experience that builds trust and eases fears.

Beyond his practice, Dr. Patel actively contributes to the Jacksonville community through charitable work, local sponsorships, and free dental clinics.

When not serving patients, he enjoys playing cricket and maintaining an active, healthy lifestyle.

Among Dr. Patel's achievements and accreditations:

## Tour the Office

<https://dentalcenterjacksonville.com/about-us/tour-the-office/>

### 1. Incorrect role defined for button. [WCAG 4.1.2 Name, Role, Value \(Level A\) - Significant](#)

**Actual:** Incorrect role as link is defined for the image buttons.

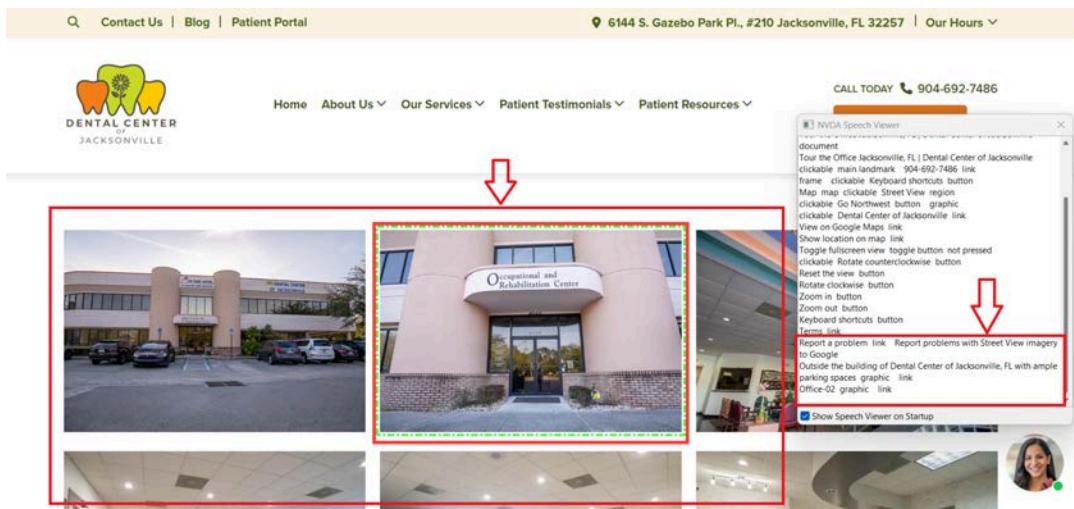

**Expected:** Role as button should be defined for the image buttons.

**Dev Recommendation:**

- I. Use the correct semantic element: if the control triggers an action (like opening or downloading the transcript), it should be a <button> element, not a link.
- II. If using a non-button element, ensure to assign role="button" and implement keyboard support (Space and Enter keys) to behave like a button.
- III. Avoid assigning role="link" to an element that performs an action rather than navigation, as it misleads assistive technologies and users.
- IV. Provide an accessible name (via inner text or aria-label) that clearly describes the button's function.

**Refer to:**

[https://developer.mozilla.org/en-US/docs/Web/Accessibility/ARIA/Reference/Roles/button\\_role](https://developer.mozilla.org/en-US/docs/Web/Accessibility/ARIA/Reference/Roles/button_role)

**2. Missing accessible name for buttons. [WCAG 4.1.2 Name, Role, Value \(Level A\)](#) - Significant**

**Actual:** In browse mode, the screen reader does not announce the name of the close button under the preview image.

**Expected:** In browse mode, the screen reader should announce the name of the close button under the preview image.

**Note:** Same issue repro for the close button under the Book appointment dialog

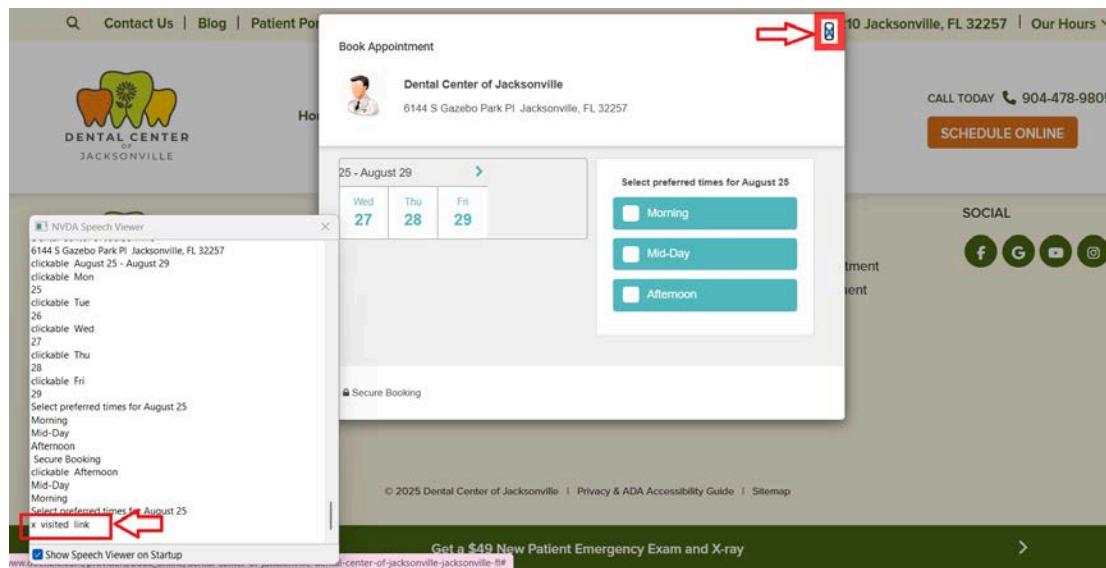

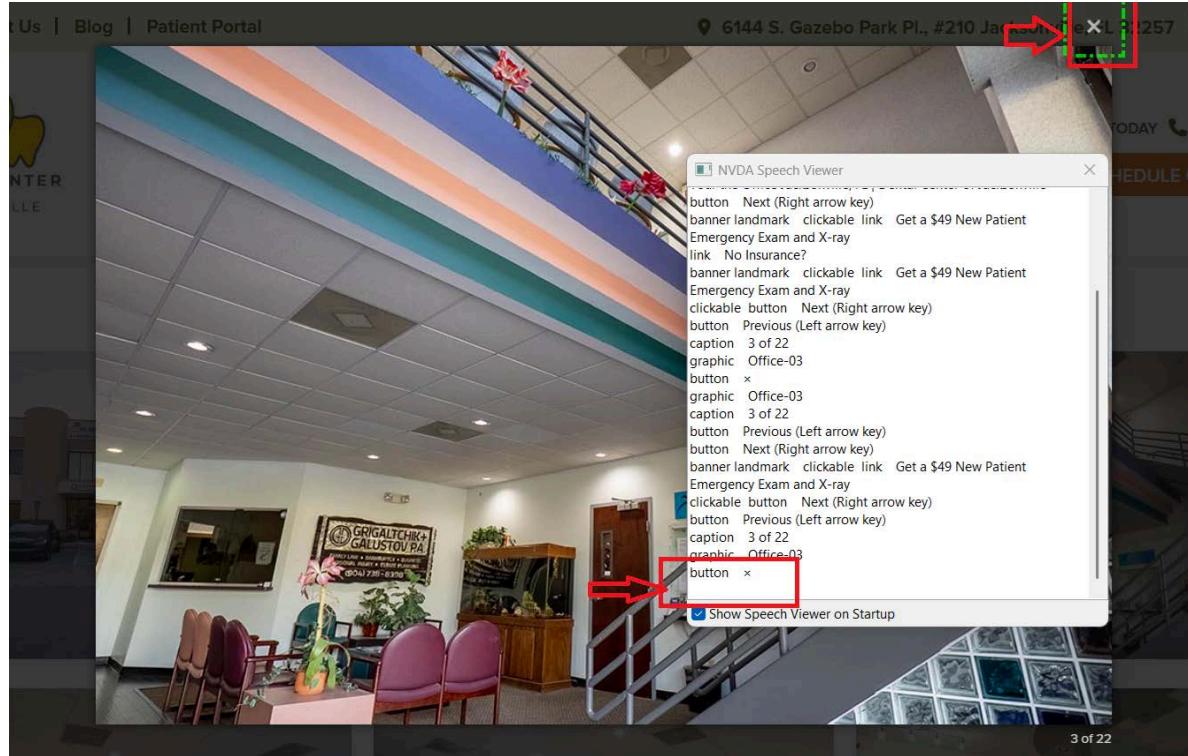

**Dev Recommendation:** Ensure each button has a clear and descriptive accessible name by:

- Adding visible text inside the <button>, or
  - Adding an aria-label attribute with descriptive text, e.g., aria-label="Close dialog".
- I. Avoid using icons alone without accessible names because screen readers cannot determine their meaning.
  - II. Use native <button> elements whenever possible to get built-in accessibility and role announcements.
  - III. Test with screen readers to verify the name is properly announced on focus in browse mode.

**Refer to:**

<https://excellentwebcheck.com/documentation/knowledge-base/accessibility/button-name>

### **1. Buttons are not descriptive. [WCAG 2.4.6 Headings and Labels \(Level AA\) - Recommendation](#)**

**Actual:** 'Read Transcript' buttons are not descriptive enough.

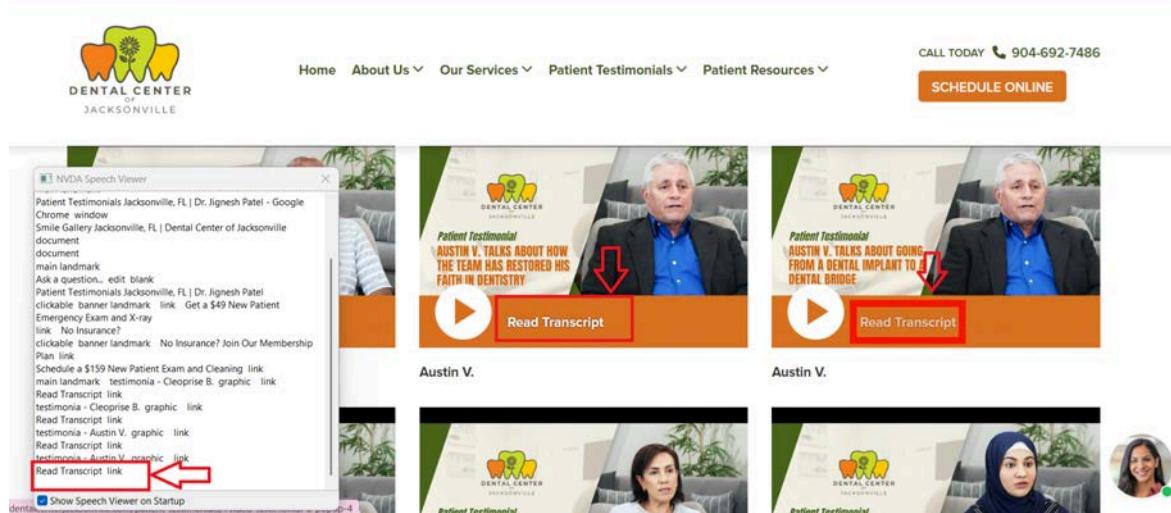

**Expected:** 'Read Transcript' buttons should be more descriptive.

**Dev Recommendation:**

- I. Use clear and specific button text that describes the action, e.g., "Read transcript for Cleoprise B" instead of generic text like "Read Transcript" alone.
- II. If using icon-only or visually minimal buttons, provide an accurate aria-label describing the function, e.g., aria-label="Read transcript for this video".
- III. Always use native <button> elements for proper semantics and screen reader support.
- IV. Test with screen readers to confirm the button's name is read clearly and conveys the correct purpose.

1. Insufficient contrast ratio for the error message [WCAG 1.4.3 Contrast \(Minimum\) \(Level AA\) - Moderate](#)

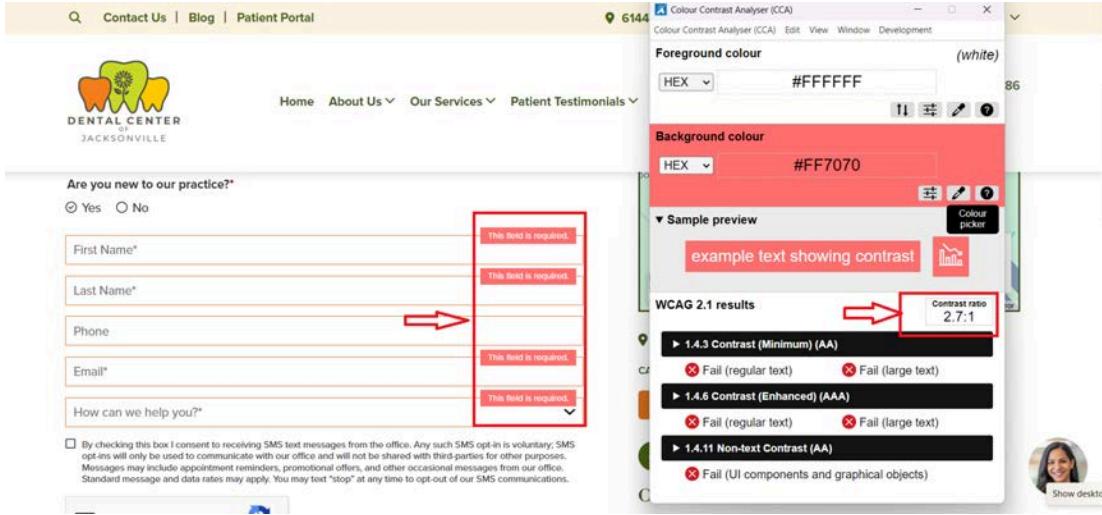

**Actual:** Contrast ratio for the red color error message having '#FFFFFF' foreground color against '#FF7070' background color is measured to be at 2.7:1, which fails the minimum requirement.

**Expected:** Contrast ratio for the error message has a regular font size, so as per the WCAG, the color contrast ratio of the text should be at least 4.5:1.

**Dev Recommendation:** Use darker foreground color for the error message to pass the color contrast ratio.

**Refer to:**

<https://www.w3.org/WAI/WCAG22/Understanding/contrast-minimum.html>

## 2. Elements are not accessible through keyboard. [WCAG 2.1.1 Keyboard \(Level A\)](#) - Critical

**Actual:** 'Yes/No' Radio buttons and 'By checking this box I consent' Checkbox are not accessible through keyboard.

**Expected:** Radio buttons and checkbox should be accessible through keyboard Tab key.

**Dev Recommendation:**

Use native HTML `<input type="radio">` and `<input type="checkbox">` elements to ensure built-in keyboard accessibility.

Ensure radio buttons are grouped inside a container with `role="radiogroup"` for proper screen reader announcement.

**Refer to:** <https://www.w3.org/WAI/ARIA/apg/patterns/radio/>

<https://www.w3.org/WAI/ARIA/apg/patterns/checkbox/>

The screenshot shows a contact form on a dental practice website. At the top left is the logo 'DENTAL CENTER of JACKSONVILLE' with three stylized teeth. The top right features a 'CALL TODAY' button (904-692-7486), a 'SCHEDULE ONLINE' button, and a navigation bar with links to Home, About Us, Our Services, Patient Testimonials, and Patient Resources.

The contact form includes the following fields:

- A question "Are you new to our practice?" with radio buttons for "Yes" and "No". A red box highlights this question, and a red arrow points from it to the "How can we help you?" dropdown below.
- Text input fields for "First Name\*", "Last Name\*", "Phone", and "Email\*". Each has a red error message box to its right stating "This field is required."
- A dropdown menu "How can we help you?" with a red error message box to its right stating "This field is required."
- A checkbox with a long descriptive text about SMS opt-in, which is also highlighted with a red box and an arrow pointing to it from the "Are you new to our practice?" section.

To the right of the form is a Google Map showing the office's location at 6144 S. Gazebo Park Pl., #210, Jacksonville, FL 32257. Below the map are social media icons for Facebook, Google+, YouTube, and Instagram, and a link to "Our Office Hours".

**3. Missing visual name of the edit fields. [WCAG 3.3.2 Labels or Instructions \(Level A\)](#) - Recommendation**

**Actual:** Visual name is not defined for the edit fields.

**Expected:** Visual name should be defined for the edit fields.

**Dev Recommendation:**

Always provide a clear, visible <label> element associated with each input using the for attribute matching the input's id

Ensure each input has a unique id and the label properly references it for correct programmatic association.

Refer to: <https://developer.mozilla.org/en-US/docs/Web/HTML/Reference/Elements/label>

The screenshot shows a contact form on a website. At the top left is the logo for "DENTAL CENTER JACKSONVILLE". The top right features a "CALL TODAY" button with the phone number 904-692-7486 and a "SCHEDULE ONLINE" button. The main content area contains a question "Are you new to our practice?" with radio buttons for "Yes" and "No". Below this is a series of input fields, each with a red border and a red arrow pointing to it. Each field has an error message "This field is required" displayed to its right. The input fields contain the text "test", "test", "111-111-1111", "test", and "Insurance Question". At the bottom of the form is a small checkbox with a note about SMS opt-in. To the right of the form is a map showing the office's location at 6144 S. Gazebo Park Pl., #210, Jacksonville, FL 32257. Below the map are social media icons for Facebook, Google+, YouTube, and Instagram. A "Our Office Hours" section is also present.

#### 4. Error message not descriptive. [WCAG 3.3.3 Error Suggestion \(Level AA\)](#) - Recommendation

**Actual:** Error message as 'This field is required' is getting displayed on the edit fields.

**Expected:** Error message should be descriptive as per the edit fields name.

##### Dev Recommendation:

Ensures that the clear, specific messages that explain what went wrong and how to fix it (e.g., "Please enter a First Name")

Refer to: <https://www.patternfly.org/ux-writing/error-messages/>

This screenshot shows the same website and form as the first one, but with improved error messages. The red arrows now point to the descriptive error messages next to the input fields. The messages are: "First Name\*", "Last Name\*", "Phone", "Email\*", and "How can we help you?\*". The rest of the page layout, including the map, social media links, and office hours, remains the same.

## Blog

<https://dentalcenterjacksonville.com/blog/>

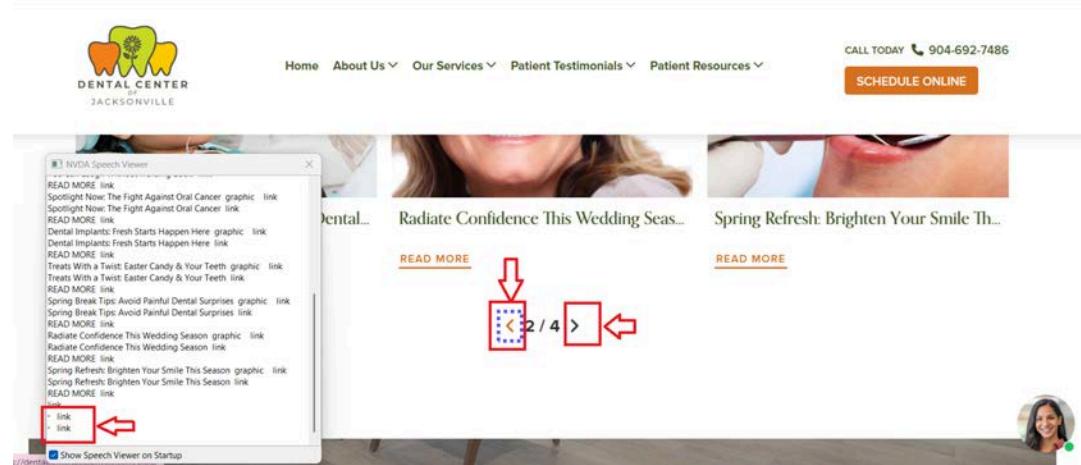

#### 1. Missing accessible name for the pagination links. [WCAG 4.1.2 Name, Role, Value \(Level A\)](#) - Significant

**Actual:** Accessible name is not defined for the pagination links such as Next/Previous page.  
**Expected:** Accessible name should be defined for the pagination links such as Next/Previous page.

#### Dev Recommendation:

Add clear, specific accessible names using aria-label on the Next/Previous page links, for example, aria-label="Go to next page" and aria-label="Go to previous page"

Refer to: <https://a11ymatters.com/pattern/pagination/>
